Social Statistics for a Diverse Society - Chava

Frankfort-Nachmias
2019-12-31

The authors are proud sponsors of the 2020 SAGE Keith Roberts Teaching Innovations Award—enabling graduate students and early career faculty to attend the annual ASA pre-conference teaching and learning workshop. The Ninth Edition of Social Statistics for a Diverse

Society continues to emphasize intuition and common sense, while demonstrating the link between the practice of statistics and important social issues. Recognizing that we live in a world characterized by a growing diversity and richness of social differences, best-selling authors Frankfort-Nachmias, Leon-Guerrero, and Davis help students learn key statistical concepts through real research examples related to the dynamic interplay of race, class, gender, and other social variables. The text also helps readers develop important skills such as problem-solving (through a rich variety of exercises), use of statistical software (both SPSS and Excel), and interpreting research literature. Included with this title: The password-protected Instructor Resource Site (formally known as SAGE Edge) offers access to all text-specific resources, including a test bank and editable, chapter-specific PowerPoint® slides. Please note that all ebooks will be corrected immediately, and the print book will be corrected when it reprints. Appendix B: The Standard Normal Table **Going to Zero** - Pablo La Roche 2017-01-08

Typically architecture students are only introduced to energy modeling in elective graduate or advanced undergraduate seminars, and when they are introduced to the design of zero net energy, low carbon buildings it is only in upper division studios. Because these courses are typically not required, only a small fraction of architecture students in some universities are actually able to take them. This is not enough. To reduce our impact on climate change we must introduce these concepts to ALL architecture students. This book describes a project done in a required environmental controls course to introduce students to the design of zero net energy buildings using

energy modeling. Students first analyzed selected mid century buildings as they were originally designed many years ago, comparing their performance with that of a California Energy Code compliant building (Title 24-2013), and then made all necessary modifications to improve building performance, beyond code, and achieve a net zero energy building.

Studying Captive Animals - Paul A. Rees 2015-06-02

Studying Captive Animals outlines the methods that may be used to study the behaviour, welfare and ecology of animals living under the control of humans, including companion animals, feral populations, and those living on farms and in zoos. This book is a step-by-step guide to the whole process of conducting a scientific study: from designing the original project, formulating testable hypotheses, and collecting and analysing the data, to drawing conclusions from the work and writing it up as a scientific report or paper. It also illustrates how to write a formal research proposal - a crucial and often difficult element of the student project - and how to deal with the ethical review process. Sample data collection sheets are provided and the analysis and presentation of data are

worked through in diagrammatic form. In addition, exercises are included that enable the reader to practice analysing different types of data and advice is provided on the selection of appropriate statistical tests. The text describes the different types of student projects that may be undertaken in the field, and explains where secondary data may be found for zoos. This is an insightful resource, particularly for those studying and working with zoo and farm animals. It is essential reading for students studying zoo biology and animal management; it is also suitable for students on courses in animal behaviour, animal welfare, zoology, biology, psychology, animal science, animal production, animal ecology, conservation biology, and veterinary science. This book is primarily intended for undergraduates but will also be of value to postgraduate students who have not previously engaged in field studies. Professionals working in institutions that are

members of the World Association of Zoos and Aquariums, the European Association of Zoos and Aquaria and other regional and national zoo organisations will benefit from access to this practical guide.

Mathematical Models for Teaching - Ann Kajander
2014-01-01

Students of mathematics learn best when taught by a teacher with a deep and conceptual understanding of the

fundamentals of mathematics. In *Mathematical Models for Teaching*, Ann Kajander and Tom Boland argue that teachers must be equipped with a knowledge of mathematics for teaching, which is grounded in modelling, reasoning, and problem-based learning.
