Powder Surface Area and Porosity - Seymour Lowell 1991-05-31

The rapid growth of interest in powders and their surface properties in many diverse industries prompted the writing of this book for those who have the need to make meaningful measurements without the benefit of years of experience. It is intended as an introduction to some of the elementary theory and experimental methods used to study the surface area, porosity, density, and particle size of powders. It may be found useful by those with little or no training in solid surfaces who have the need to learn quickly the rudiments of surface area, density, pore size, and particle size measurements. S. Words of Mercury - Patrick Leigh Fermor 2003-01-01

Patrick Leigh Fermor was only 18 when he set off to walk from the Hook of Holland to Constantinople, described many years later in *A Time of Gifts* and *Between the Woods and the Water*. It was during these early wanderings that he started to pick up languages, and where he developed his extraordinary sense of the continuity of history: a quality that deepens the colours of every place he writes about, from the peaks of the Pyrenees to the cell of a Trappist monastery. His experiences in wartime Crete sealed the deep affection he had already developed for Greece, a country whose character and customs he celebrates in two books, *Mani and Roumeli*, and where he has lived for over forty years. Whether he is drawing portraits in Vienna or sketching Byron's slippers in Missolonghi, the Leigh Fermor touch is unmistakable. Its infectious enthusiasm is driven by an insatiable curiosity and an omnivorous mind - all inspired by a passion for words and language that makes him one of the greatest prose writers of his generation.

Mustang - vierzig Jahre - Randy Leffingwell 2004

Die Ford Motor Company schuf mit dem Mustang 1964 die Spezies der relativ kompakten, 2+2-sitzigen, aber dennoch sehr leistungsstarken US-Coupés. Die sogenannten "Pony Cars" sollten jene bürgerlichen Sportwagenliebhaber in ihren Bann ziehen, bei denen Praxisnutzen, tolle Optik und sportliche Fahrleistung nicht im Widerspruch zueinander stehen durften. Der Erfolg war durchschlagend und auch nach 40 Jahren findet die aktuelle Evolutionsstufe des Mustangs ihre Fans. Grundgenug, dieser automobilen Ikone ein Jubiläumsbuch zu widmen. Auf weit über 300 Seiten lässt der Autor die Historie des Mustang kompetent, faktenreich und mit einem tiefen Blick hinter die Kulissen Revue passieren. Faszinierendes, zum größten Teil exklusiv geschossenes Bildmaterial macht diesen großformatigen Prachtband zu einem Muss für die zahlreichen Mustang-Liebhaber im deutschsprachigen Raum.

Giordano Bruno and the Philosophy of the Ass - Nuccio Ordine 1996-01-01

In this highly original study, Nuccio Ordine uses the figure of the ass as a lens through which to focus on the thought and writings of the great Renaissance humanist philosopher Giordano Bruno. The donkey played a prominent role as a symbol in sixteenth-century literature, and the ass and human asininity became a recurring motif in Bruno's writings. Ordine offers the first analysis of Bruno's use of this complex symbol, which encompasses contradictory characteristics ranging from humble and hardworking to ignorant and idle. The result is a deeper understanding of Bruno the philosopher, along with a stronger appreciation of Bruno the literary artist. Ordine looks especially closely at Bruno's use of the figure of the donkey in his attacks on the theologies of both the Reformation and the Counter-Reformation, and in issues that have become modernist concerns. Ordine's analysis sheds light on each of the major themes of Bruno's philosophy: science and knowledge, myth and religion, language and literature.

Photochemical Purification of Water and Air - Thomas Oppenländer 2003-02-03

While the treatment of water and exhaust gas using ultraviolet (UV) light offers both ecological and economic advantages, information on photo-initiated advanced oxidation technologies (AOTs) has been dispersed among various journals and proceedings until now. This authoritative and comprehensive handbook is the first to cover both the photochemical fundamentals and practical applications, including a description of advanced oxidation processes (AOPs) and process engineering of suitable photoreactors. The author presents various real-world examples, including economic aspects, while many references to current scientific literature facilitate access to current research topics relevant for water and air industries. Throughout, over 140 detailed figures visualize photochemical and photophysical phenomena, and help in interpreting important research results. From the foreword by James R. Bolton (President of Bolton Photosciences Inc., Executive Director of the International Ultraviolet Association (IUVA)): "Prof. Oppenländer is well qualified to write about the AOPs/AOTs, since he has contributed to this literature in a very significant manner. This book will be of considerable value to graduate students, science and engineering faculty, scientists, process engineers and sales engineers in industry, government regulators and health professionals."

The Vexations of Art - Svetlana Alpers 2005-01-01

"Alpers concentrates on the art of the seventeenth century, but also looks back and forward in time. She considers Velazquez as curator of the Spanish royal collection, which included many works by his admired predecessors Titian and Rubens. Velazquez also resembles Manet, and the affinity between the two painters is analyzed. Both worked in a tradition that assumed that there were persistent pictorial problems to take up. Inventive change was encouraged. Art such as this vexes or unsettles our view of the world even as it gives us reason to pause and look. The book concludes by asking whether painting continues to do that today." "This book reflects Alpers's close looking and long reflection upon a certain tradition of European painting. It illuminates the nature of what the most alert painters do, and why."--BOOK JACKET.
