Study Guide to Human Anatomy and Physiology 1 - Michael Harrell M. S. 2012-08-01

Welcome everyone to your guide to Human Anatomy & Physiology! This book covers the following topics: body organization and terminology, chemistry of the body, cell anatomy and physiology, tissues, integumentary system, skeletal system, muscular system, nervous system, brain, spinal cord, sympathetic and parasympathetic nervous system, and senses. I have been teaching college level human anatomy and physiology for many years, as well as other courses. My other classes taught have included: pathophysiology, biology, zoology, microbiology, and others. I have learned through the years the best ways to learn the most information in the least amount of time. This guide will give you the important information from the chapters, which will be what you are most likely to see on an exam. Sample questions will be included, which are also the most likely for you to see on an exam. Note also that this book is not a guide for A&P lab. This book will cover the topics needed for the first half of a two semester college level Human Anatomy & Physiology course.

Handbook of Cardiac Anatomy, Physiology, and Devices - Paul A. Iaizzo 2009-07-01

A revolution began in my professional career and education in 1997. In that year, I visited the University of Minnesota to discuss collaborative opportunities in cardiac anatomy, physiology, and medical device testing. The meeting was with a faculty member of the Department of Anesthesiology, Professor Paul Iaizzo. I didn't know what to expect but, as always, I remained open minded and optimistic. Little did I know that my life would never be the same. . . . During the mid to late 1990s, Paul Iaizzo and his team were performing anesthesia research on isolated guinea pig hearts. We found the work appealing, but it was unclear how this research might apply to our interest in tools to aid in the design of implantable devices for the cardiovascular system. As discussions progressed, we noted that we would be far more interested in reanimation of large mammalian hearts, in particular, human hearts. Paul was confident this could be accomplished on large hearts, but thought that it would be unlikely that we would ever have access to human hearts for this application. We shook hands and the collaboration was born in 1997. In the same year, Paul and the research team at the

University of Minnesota (including Bill Gallagher and Charles Soule) reanimated several swine hearts. Unlike the previous work on guinea pig hearts which were reanimated in Langendorff mode, the intention of this research was to produce a fully functional working heart model for device testing and cardiac research.
