Voice and Involvement at Work - Paul J. Gollan 2014-08-21

In the last decade, nonunion employee representation (NER) has become a much discussed topic in the fields of human resource management, employment relations, and employment/labor law. This book examines the purpose, structure, and performance of various types of employee representation bodies created by companies in non-union settings to promote collective forums for voice and involvement at the workplace. This unique volume presents the first longitudinal evidence on the performance, success, and failure of NER plans over an extended time period. Consisting of twelve detailed, in-depth case studies of actual NER plans in operation across four countries, this volume provides unparalleled evidence on such matters as: the motives behind the initial establishment of NER, different organizational forms of NER in industry, key success and failure factors over the long-term, pro and con evaluations for employers and employees, and more. *Voice and Involvement at Work* captures an unequalled international and comparative perspective through a wide cross-section of different NER forms.

Reservoir Compartmentalization - S. J. Jolley 2010

"Reservoir compartmentalization - the segregation of a petroleum accumulation into a number of individual fluid/pressure compartments - controls the volume of moveable oil or gas that might be connected to

any given well drilled in a field, and consequently impacts 'booking' of reserves and operational profitability. This is a general feature of modern exploration and production portfolios, and has driven major developments in geoscience, engineering and related technology. Given that compartmentalization is a consequence of many factors, an integrated subsurface approach is required to better understand and predict compartmentalization behaviour, and to minimize the risk of it occurring unexpectedly. This volume reviews our current understanding and ability to model compartmentalization. It highlights the necessity for effective specialist discipline integration, and the value of learning from operational experience in: detection and monitoring of compartmentalization; stratigraphic and mixed-mode compartmentalization; and fault-dominated compartmentalization"--Page 4 of cover.

Talking Sustainability in the Boardroom - Heiko Spitzeck 2018-07-16

A Global CEO study by Accenture and the UN Global Compact has shown that 94% of CEOs think that their board should discuss sustainability. And yet there is a real danger that boards are not living up to expectations on sustainability, paying lip-service to the concept rather than fully embedding social and environmental issues into their strategies and operations. *Talking Sustainability in the Boardroom* sets out why this is the case, identifies the obstacles, and then explains the opportunities for the long-term performance of the organisation that can arise through focusing on social and environmental issues. Written by two leading specialists in sustainability who have significant experience of working directly with boards, this book presents a very practical framework for embedding sustainability into board conversations and strategies. Steps include identifying and prioritising the social and environmental issues that are most pertinent to the organisation and will have the biggest impact on business, presenting the competences and skills to enable this, guidance on how to structure board meetings to

ensure that these conversations truly take place, and the development of action plans and tools for measurement.
