Überflieger - Malcolm Gladwell 2009-01-12
Malcolm Gladwell, Bestsellerautor und Star des amerikanischen Buchmarkts, hat die wahren Ursachen des Erfolgs untersucht und darüber ein lehrreiches, faszinierendes Buch

geschrieben. Es steckt voller Geschichten und Beispiele, die zeigen, dass auch außergewöhnlicher Erfolg selten etwas mit individuellen Eigenschaften zu tun hat, sondern mit Gegebenheiten, die es dem einen leicht und dem anderen unmöglich machen, erfolgreich zu sein. Die Frage ist nicht, wie jemand ist, sondern woher er kommt: Welche Bedingungen haben diesen Menschen hervorgebracht? Auf seiner anregenden intellektuellen Erkundung der Welt der Überflieger erklärt Gladwell unter anderem das Geheimnis der Softwaremilliardäre, wie man ein herausragender Fußballer wird, warum Asiaten so gut in Mathe sind und was die Beatles zur größten Band aller Zeiten machte.

One of a Kind - Walter H. Diamond 2005-12-12

In this detailed yet highly readable memoir, Walter H. Diamond tells how his prestigious career evolved and how he came to recognize and cultivate personal and intellectual traits that were crucial to achievement, such as perseverance, memory, and affinity for foreigners. Diamond's work as a bank examiner for the U.S. Treasury led to new challenges in World War II. As an officer in the U.S. Navy he was involved in six military operations in both the Pacific and Europe, including D-day. He was asked to engineer the safe return of 1,800 survivors of a sunken flotilla. As trade and investment adviser at the U.N. he helped more than 100 world leaders—from kings to presidents, prime ministers to finance ministers—draft plans for fighting poverty. Now Diamond tells what he feels separates the great from the weak, which leaders have impressed him most, and why. Finally, he offers a revelatory assessment on terrorism, and a feasible route to world peace through trade.

THE EDUCATION AND DECONSTRUCTION OF MR. BLOOMBERG - Sally A. Friedman
2010-07-12

This is an exposé detailing New York City Mayor Michael Bloomberg's education and construction policies between 2002 and 2009 inclusive. It covers all major education issues: schools chancellor, school budget, grading of the schools, reducing class sizes, small, charter and culturally themed schools, standardized testing, school safety, overcrowding and mayoral control; and all major real estate development issues: rezoning, ULURP, self-certification, various fatal construction accidents and disasters, affordable housing, lack of construction, law enforcement, and the large projects that characterized the administration. This book features a list of abbreviations and a comprehensive index in the back. A page of the Introduction, p. 11, is crucial for understanding

references made throughout the book.

Therefore, it is reproduced below: "Making himself available to parents. The mayor performed the important tasks of negotiating with the unions, securing funding from the higher powers and making public relations appearances when there was good news to report. I have observed that there were three recurring themes in Mr. Bloomberg's modus operandi in both Education and Real Estate Development: Theme 1: He was overly optimistic. As his various education initiatives and construction projects progressed, he routinely threw around and changed numbers on standardized test scores, graduation rates, school openings, school crime rates, construction costs, creation of jobs and affordable housing units, among others, and sometimes even distorted facts outright. Theme 2: Time after time, Mr. Bloomberg asked for input from the community, or purported to, on new school openings and on construction of schools and other projects, but usually ended up hiring his cronies and ignored the community's wishes. Theme 3: He took advantage of legal loopholes or skirted around the law to forge ahead with his agenda. His agenda was to acquire power. Why else did he take control of the schools and overturn term limits? It was not for the money. In November 2009, Mr. Bloomberg won his third-term election bid by a narrow margin, mostly because he was still viewed as a stronger candidate than the opposing one. His power and popularity were waning, however, rocked by various investigations in recent years, including a slush-fund scandal, and corruption and sloppiness in construction that led to fatal accidents that resulted in the termination of decades-long unethical practices. Further, he was accused of being involved in various conflicts of interest and of being hypocritical on environmental and health issues. Two farmyard clichés and one generic cliché also aptly describe many occurrences during the Bloomberg administration between 2002 and 2009: Cliché 1: "Just another case of the fox guarding the henhouse" Cliché 2: "Closing the barn door after the horses have already fled" Cliché 3: "Do as I say, not as I do" The above themes and clichés are so common in my text, that I refer to their

generic names; i.e., I will use the blog style, for example, "File under Theme 1" or "File under Cliché 2" when providing evidence of same. Enjoy."

The Algebra Conspiracy - Michael Wiener 2000-09

The Algebra Conspiracy is an irreverent, radical, politically incorrect, passionate challenge to the increasingly popular program of the educational establishment which requires every student to take two to four years of college-preparatory mathematics to earn a high school diploma. These well-meaning but misguided people are placing every secondary school student into Algebra, Geometry and Trigonometry classes that they may not want, that they may not need to fulfill requirements for future employment, or that they may not be academically equipped to handle. This means, for instance, that a youngster who has trouble adding common fractions, computing with percents or even making change on a ten dollar purchase will nevertheless be required to pass Algebra and Geometry. In many school districts this is already creating an academic nightmare, as more and more math teachers are faced with the Hobson's choice of either failing many of their students who simply cannot handle Algebra and Geometry, or handing out numerous "gift D's," or severely watering down the college-prep mathematics curriculum so more students can pass the classes. The author takes the controversial view that, the Age of Technology notwithstanding, a large percentage of today's secondary school youngsters could, if allowed, live their entire adult working lives very comfortably without ever being forced to set foot in Algebra and Geometry classrooms. There are many other classes that these youngsters should be taking — such as cultural or practical arts electives — instead of wasting their time in college-prep math classes.

Fellows in Arms: A 21st Century Teaching Saga - Aaron Roston 2009-02-06

This story begins as war stories often do: as a call to arms. In the wake of 9/11, Aaron Roston joined the New York City Teaching Fellows program, created to parachute elite career-changers into the schools euphemistically known

as hard-to-staff. Thousands answered the call; few were chosen. 25 members of Roston's class began their service in 2002; by the summer of 2005, only 7 remained in the system. FELLOWS IN ARMS is the view from the sharp end of educational reform, and dramatizes what the term teacher accountability really means. The story of idealistic teachers in urban school settings has become cliché. But FELLOWS IN ARMS is different: It uses memoir, history and reportage to create a narrative that finds humor and drama in equal measure. No dry policy book, this is the maddening, sometimes tragic, often comic saga of what ensued when the school bell sounded.
