Bioethics, Public Health, and the Social Sciences for the Medical Professions - Amy E. Caruso Brown 2019-07-18

This unique textbook utilizes an integrated, case-based approach to explore how the domains of bioethics, public health and the social sciences impact individual patients and populations. It provides a structured framework suitable for both educators (including course directors and others engaged in curricular design) and for medical and health professions students to use in classroom settings across a range of clinical areas and allied health professions and for independent study. The textbook opens with an introduction, describing the intersection of ethics and public health in clinical practice and the six key themes that inform the book's core learning objectives, followed by a guide to using the book. It then presents 22 case studies that address a broad spectrum of patient populations, clinical settings, and disease pathologies. Each pair of cases shares a core concept in bioethics or public health, from community perspectives and end-of-life care to medical mistakes and stigma and marginalization. They engage learners in rigorous clinical and ethical reasoning by prompting readers to make choices based on available information and then providing additional information to challenge assumptions, simulating clinical decision-making. In addition to providing a unique, detailed clinical scenario, each case is presented in a consistent format, which includes learning objectives, questions and responses for self-directed learning, questions and responses for group discussion, references, and suggested further reading. All cases integrate the six themes of patient- and family-centered care; evidence-based practice; structural competency; biases in decision-making; cultural humility and awareness of the culture of medicine; and justice, social responsibility and advocacy. The final section discusses some challenges to evaluating courses and learning encounters that adopt the cases and includes a model framework for learner assessment.

Thought in Action - Barbara Gail Montero 2016-04-28

How does thinking affect doing? There is a widely held view—both in academia and in the popular press—that thinking about what you are doing, as you are doing it, hinders performance. Once you have acquired the ability to putt a golf ball, play an arpeggio on the piano, or parallel-park, reflecting on your actions leads to inaccuracies, blunders, and sometimes even utter paralysis—that's what is widely believed. Experts, according to this view, don't need to try to do it; they just do it. But is this true? After exploring some of the contemporary and historical manifestations of the idea that highly accomplished skills are automatic and effortless, Barbara Gail Montero develops a theory of expertise which emphasizes the role of the conscious mind in expert action. She aims to dispel various myths about experts who proceed without any understanding of what guides their action. (For example, that proverbial chicken sexer who can't explain why he makes his judgments? He simply doesn't exist.) Montero's critical task also involves analyzing research in both philosophy and psychology that is taken to show that conscious control and explicit monitoring of one's movements impedes well practiced skills. She explores a wide range of real-life examples of optimal performance—culled from sports, the performing arts, chess, nursing, medicine, the military and elsewhere—and draws from psychology, neuroscience, and literature to offer a refreshing and persuasive view of expertise, according to which expert action generally is and ought to be thoughtful, effortful, and reflective.

deWit's Fundamental Concepts and Skills for Nursing -Second South Asia Edition, E-Book Towards Human Rights in Residential Care for Older Persons - Helen Meenan 2015-07-30

People are leading significantly longer lives than previous generations did, and the proportion of older people in the population is growing. Residential care for older people will become increasingly necessary as our society ages and, we will require more of it. At this moment in time, the rights of older people receive attention at international and regional levels, with the United Nations, the Organization of American States and the African Union exploring the possibility of establishing new conventions for the rights of older persons. This book explores the rights of older people and their quality of care once they are living in a care home, and considers how we can commence the journey towards a human rights framework to ensure decent and dignified care for older people. The book takes a comparative approach to present and future challenges facing the care home sector for older people in Africa (Kenya), the Arab world (Egypt), Australia, China, England, Israel, Japan and the USA. An international panel of experts have contributed chapters, identifying how their particular society cares for its older and oldest people, the extent to which demographic and economic change has placed their system under pressure and the role that residential elder care homes play in their culture. The book also explores the extent to which constitutional or other rights form a foundation to the regulatory and legislative structures to residential elder care and it examines the important concept of dignity. As a multi-regional study of the care of older person from a human rights perspective, this book will be of excellent use and interest, in particular to students and researchers of family and welfare law, long-term care, social policy, social work, human rights and elder law.

deWit's Fundamental Concepts and Skills for Nursing - E-Book - Patricia A. Williams 2016-12-23

Fundamental Concepts and Skills for Nursing, 5th Edition provides all the basic theoretical and applied knowledge that the LPN/LVN nurse needs to practice in an expanded number of care settings, such as the community clinic, physician's office, long-term care facility, home, and acute-care hospital setting. With an extensive art program and thorough discussion of QSEN, this text addresses topics like the physical and psychosocial needs of the patient, critical thinking for problem solving and clinical judgment, and communication — all within a strong nursing process framework. The accessible, friendly, and clear writing style appeals to students and instructors, and its rich ancillary package, including NCLEX-PN® review questions, gives students an edge on learning fundamentals. Concept maps give a visual example of concepts addressed in the text, help you visualize difficult material, and illustrate how a disorder's multiple symptoms, treatments, and side effects are associated. Over 110 skills and steps, featuring sample documentation examples and Home Care Considerations boxes where appropriate, present step-by-step procedures in an action/rationale format. Life Span Considerations: The Older Adult highlight changes that occur with aging and how they affect nursing care by LPN/LVNs working in community and long-term care. Easy-to-follow reading level and text organization presents information from simple to most complex, making it perfect for lower level students and those speaking English as a second language. Numbered objectives, divided by theory and clinical practice, provide a framework for content. Cultural Considerations cover biocultural variations, as well as health promotion for specific ethnic groups, so you provide culturally competent care. Health Promotion and Patient Teaching boxes include guidelines to prevent illness, promote health, and develop self-care strategies. Nursing process framework features application of the nursing process and nursing care plans to reinforce application of the nursing process in the clinical setting. Think Critically boxes encourage you to synthesize information and apply concepts to practice. Home Care Considerations boxes highlight the necessary adaptations of nursing skills and techniques for

the patient in the home care setting. Communication boxes present examples of nurse-patient dialogues and instructive therapeutic communication techniques. Over 20 nursing care plans, which include critical thinking questions at the end of the text, provide you with a model for planning patient care. Clinical chapters provide an overview of structure and function to give you a refresher in related anatomy and physiology, including a section on aging. Key terms include phonetic pronunciations, which are helpful for ESL students, and text page references to find the definition. Standard LPN Threads features include helpful characteristics such as full-color design, key terms, numbered objectives, key points, critical thinking questions, critical thinking activities, glossary, and references.

Practical Transfusion Medicine - Michael F. Murphy 2022-08-22

Practical Transfusion Medicine Practical Transfusion Medicine, Sixth Edition The pace of change in transfusion medicine is relentless, with new scientific and technological developments and continuing efforts to improve transfusion practice. This sixth edition of Practical Transfusion Medicine has been updated significantly to reflect the rapid changes in transfusion medicine since the fifth edition was published in 2017. The primary purpose of this edition remains the same as the first: to provide a comprehensive guide to transfusion medicine. This book contains more depth of information than standard handbooks on transfusion medicine, whilst being more concise and approachable than a standard reference text. This book covers the principles of transfusion medicine, the complications of transfusion, practice in blood centres and hospitals and clinical transfusion practice. This sixth edition includes a new section on patient blood management, cellular and tissue therapy, organ transplantation and the development of the evidence base for transfusion. It also features a new chapter on transfusion-associated circulatory overload to underline its importance as a complication of transfusion, and a reconfiguration of the section on clinical transfusion practice to allow consideration of the transfusion management of medical, surgical and haematology patients with and without bleeding. This sixth edition of Practical Transfusion Medicine provides accessible and comprehensive coverage of the field of transfusion medicine. It is a standalone text that will be useful to clinical and scientific staff: not only for trainees who require an overview of the field, but also for established practitioners who are involved in some aspect of transfusion medicine and require a comprehensive, accessible reference book.
