Darwin, Then and Now - Richard William Nelson 2009-07-23

Darwin, Then and Now is a journey through the most amazing story in the history of science; encapsulating who Darwin was, what he said and what scientists have discovered since the publication of The Origin of Species in 1859. While recognized as one of the most influential individuals of the twentieth century, little is widely known about his personal life, interests, and motivations. This book explores Darwins driving passion using Darwins own words from The Origin of Species, Autobiography, Voyage of the Beagle and letters. In retracing the roots of evolution from the Greeks, Darwin, Then and Now journeys through the dynamics of the eighteenth century that lead to the publication of The Origin of Species and the succeeding role of key players in the emerging evolution revolution. Darwin, Then and Now examines Darwins theory with more than three-hundred quotations from The Origin of Species, spotlighting what Darwin said concerning the origin of species and natural selection using the American Museum of Natural History Darwin exhibit format. With over one-thousand referenced quotations from scientists and historians, Darwin, Then and Now explores the scientific evidence over the past 150 years from the fossil record, molecular biology, embryology, and modern genetics. Invertebrate Embryology and Reproduction - Fatma El-Bawab 2020-01-18

Invertebrate Embryology and Reproduction deals with the practical and theoretical objectives of the descriptive embryology of invertebrates, along with discussions on reproduction in these groups of animals. It explains several morphological and anatomical expressions in the field and covers the embryology of invertebrate animals, starting from the Protozoa, to the Echinodermata, the Protochordate and Tunicates. These groups include economically important aquatic invertebrates, such as crustaceans, as well as medically important invertebrates and economic arthropods. Each chapter is preceded by the taxonomy of the discussed phylum and/or the species to enable the reader to locate the systematic position. Covers phylum definition, general characteristics, classification, reproduction, agametic reproduction, gametic reproduction, spawning, fertilization, development and embryogenesis Includes recent findings in the area, along with detailed figures and photos that illustrate important concepts Brings together difficult-to-obtain research data from the field, not only in Egyptian libraries, but globally, and previously only found through specialized references not widely available Clarifies descriptions with striking photos and electron microscopical studies of different species

The Intelligent Movement Machine - Michael Graziano 2009

This clearly written book book includes a complete history of motor cortex research from its discovery to the present, a discussion of the major issues in motor cortex research, and an account of recent experiments that led to Graziano's 'action map' view.--[Source inconnue].

Practicing Biology - Jean Heitz 2004

Table of contents continued -- How are water and good transported in plants? -- What do you need to consider in order to grow plants in space (or anywhere else for that matter)? -- How can plant reproduction be modified using biotechnology? -- How do gravity and light affect plant growth responses? -- How does an organism's structure help it maintain homeostasis? -- How are form and function related in the digestive system? -- How is mammalian heart structure related to function? -- How do we breathe, and why do we breathe? -- How does the immune system keep the body free of pathogens? -- What is nitrogenous waste, and how is it removed from the body? -- How do hormones regulate cell functions? -- How does the production of male and female gametes differ in humans? -- What common events occur in the early development of animals? -- How do neurons function to transmit information? -- What would happen if you modified a particular aspect of neuron function? -- How does sarcomere structure affect muscle function? -- What would happen if you modified particular aspects of muscle function? -- What factors determine climate? -- What determines behavior? -- What methods can you use to determine population density and distribution? -- What models can you use to calculate how quickly a population can grow? -- What do you need to consider when analyzing communities of organisms? -- What limits do available solar radiation and nutrients place on carrying capacities? -- What factors can affect the survival of a species or community? The activities of this workbook focus on key ideas, principles and concepts that are basic to understanding biology. The overall organization follows that of Campbell/Reece, Biology, 7th edition.-p. vii.

Evolution and the Recognition Concept of Species - H. E. H. Paterson 1993

Hugh E. H. Paterson's ideas on species and speciation--the process of evolutionary "branching" by which new species are formed--have become increasingly important to an understanding of evolution. Over the last 35 years Paterson has presented his research in a variety of scientific journals published around the world, many of which are not easily available in North America. Edited by Shane McEvey, Evolution and the Recognition Concept of Species brings together for the first time all of Paterson's work on species and speciation. In new introductions prepared especially for this volume, Paterson comments on each paper and describes its reception by other scientists. From 1956 to the present Paterson has developed a widely known and respected research program on how speciation occurs. Paterson contends that speciation is not an adaptive process, but a passive consequence of the adaptation of intraspecific bonding mechanisms to a new environment. The conceptual basis of his research has come to be called the Recognition Concept of Species involving the Specific-Mate Recognition System. Evolution and the Recognition Concept of Species provides not only a collection of original source material, but also an annotated history of the development of a scientific idea. "Evolutionary biologists, behavioral ecologists, ethnologists, animal behaviorists, ecologists, and systematists will want to read Evolution and the Recognition Concept of Species. Paterson's writings represent an interesting, original, and useful viewpoint on the species concept, but have been almost impossible to find until the publication of this book."--John Endler, University of California, Santa

Barbara. "Species concepts are central to all biology. Everyone interested in species and speciation should read Paterson's articles, and this book is a convenient place to start, because it brings together publications that may not be readily obtained in many libraries."--BioScience. "The book is well-produced and its value is enhanced by the introductory Preface and notes to each of the chapters provided by Hugh Paterson himself."--Heredity

Handbook for Critical Reading - Don Meagher 1997

The Handbook for Critical reading is designed to teach students how to understand a piece of writing and to think about it analytically. Although it gives examples and models of each reading skill, it allows students to use their own reading materials -- textbooks, newspapers, anthologies, and novels -- to practice their reading skills. The student or teacher can determine the reading practice that is most relevant to each student and use that to practice reading skills. This unique book has some of the best available coverage of inference, figurative language, fact/opinion, author bias, and argument analysis.

Bacterial Genetics and Genomics - Lori A.S. Snyder 2020-03-25

Our understanding of bacterial genetics has progressed as the genomics field has advanced. Genetics and genomics complement and influence each other; they are inseparable. Under the novel insights from genetics and genomics, once-believed borders in biology start to fade: biological knowledge of the bacterial world is being viewed under a new light and concepts are being redefined. Species are difficult to delimit and relationships within and between groups of bacteria - the whole concept of a tree of life - is hotly debated when dealing with bacteria. The DNA within bacterial cells contains a variety of features and signals that influence the diversity of the microbial world. This text assumes readers have some knowledge of genetics and microbiology but acknowledges that it can be varied. Therefore, the book includes all of the information that readers need to know in order to understand the more advanced material in the book.

Stratigraphy - Andrew D. Miall 2022

The updated textbook is intended to serve as an advanced and detailed treatment of the evolution of the subject of stratigraphy from its disparate beginnings as separate studies of sedimentology, lithostratigraphy, chronostratigraphy, etc., into a modern integrated discipline in which all components are necessary. There is a historical introduction, which now includes information about the timeline of the evolution of the components of modern stratigraphy. The elements of the various components (facies analysis, sequence stratigraphy, mapping methods, chronostratigraphic methods, etc.) are outlined, and a chapter discussing the modern synthesis is included near the end of the book, which closes with a discussion of future research trends in the study of time as preserved in the stratigraphic record.

Provides an overview of historical and contemporary theories of evolution, discusses key concepts and terms, and argues that our understanding of evolution has changed the beliefs and values of modern man.

Student Study Guide for Biology [by] Campbell/Reece/Mitchell - Martha R. Taylor 1999

Evolution and Religion in American Education - David E. Long 2011-08-03

Evolution and Religion in American Education shines a light into one of America's dark educational corners, exposing the regressive pedagogy that can invade science classrooms when school boards and state overseers take their eyes off the ball. It sets out to examine the development of college students' attitudes towards biological evolution through their lives. The fascinating insights provided by interviewing students

about their world views adds up to a compelling case for additional scrutiny of the way young people's educational experiences unfold as they consider—and indeed in some cases reject—one of science's strongest and most cogent theoretical constructs. Inevitably, open discussion and consideration of the theory of evolution can chip away at the mental framework constructed by Creationists, eroding the foundations of their faith. The conceptual battleground is so fraught with logical challenges to Creationist dogma that in a number of cases students' exposure to such dangerous ideas is actively prevented. This book provides a detailed map of this astonishing struggle in today's America—a struggle many had thought was done and dusted with the onset of the Enlightenment.

Der Ausdruck der Gemütsbewegungen beim Menschen und den Tieren - Charles Darwin 2014-01-08

Bereits ein Jahr nach seinem grundlegenden Werk „Die Abstammung des Menschen und die geschlechtliche Zuchtwahl“ in dem Darwin seine Evolutionstheorie des Menschen erläuterte, erschien sein „Der Ausdruck der Gemütsbewegungen beim Menschen und den Tieren“, das hiermit erstmals als E-Book in deutscher Sprache erscheint. In diesem Werk legt Darwin dar, dass auch die Gefühle und deren Ausdrucksweise sich bei Mensch und Tieren gleichen und wie äußere Merkmale durch Evolution entstanden sind. Er untersuchte unter anderem, ob die Art und Weise, wie die Aktivität der Gesichtsmuskeln des Menschen - die Mimik - seine Emotionen sichtbar macht, durch Lernen erworben oder vermutlich angeboren sei. Auch wies er auf zahlreiche Parallelen beim Ausdrucksverhalten von Mensch und Tier hin und deutete diese Übereinstimmungen als Stütze für seine Theorie einer Abstammung des Menschen und der Tiere von gemeinsamen Vorfahren. Seine Argumentation war von Beginn an umstritten, und sein Buch geriet für Jahrzehnte sogar nahezu in Vergessenheit. Wenige Monate nach Erscheinen wurden bereits 9000 Exemplare verkauft, danach geriet der Absatz jedoch ins Stocken. Eine zweite verbesserte Auflage wurde später kaum beachtet. In diesem Buch finden sich viele Beobachtungen und Erklärungen, die auch nach heutigem wissenschaftlichen Kenntnisstand zutreffend sind; andere sind völlig irrig; und es gibt einige über die sich die Wissenschaft bis heute streitet. Bereits im Jahr der englischen Erstausgabe erschien eine Übersetzung des deutschen Zoologen Victor Carus, die Grundlage dieses E-Book ist. Diese Übersetzung wurde modernisiert und in die neue deutsche Rechtschreibung übertragen.

Cognition, Evolution, and Behavior - Sara J. Shettleworth 2010-04-10

How do animals perceive the world, learn, remember, search for food or mates, communicate, and find their way around? Do any nonhuman animals count, imitate one another, use a language, or have a culture? What are the uses of cognition in nature and how might it have evolved? What is the current status of Darwin's claim that other species share the same "mental powers" as humans, but to different degrees? In

this completely revised second edition of *Cognition, Evolution, and Behavior*, Sara Shettleworth addresses these questions, among others, by integrating findings from psychology, behavioral ecology, and ethology in a unique and wide-ranging synthesis of theory and research on animal cognition, in the broadest sense—from species-specific adaptations of vision in fish and associative learning in rats to discussions of theory of mind in chimpanzees, dogs, and ravens. She reviews the latest research on topics such as episodic memory, metacognition, and cooperation and other-regarding behavior in animals, as well as recent theories about what makes human cognition unique. In every part of this new edition, Shettleworth incorporates findings and theoretical approaches that have emerged since the first edition was published in 1998. The chapters are now organized into three sections: Fundamental Mechanisms (perception, learning, categorization, memory), Physical Cognition (space, time, number, physical causation), and Social Cognition (social knowledge, social learning, communication). Shettleworth has also added new chapters on evolution and the brain and on numerical cognition, and a new chapter on physical causation that integrates theories of instrumental behavior with discussions of foraging, planning, and tool using.

A Cognitive Semantics Approach to Darwin's Theory of Evolution - Dr. Anna Drogosz 2019

DARWIN'S THEORY OF EVOLUTION ranks among the most influential of modern scientific theories.

Applying the methodology of COGNITIVE SEMANTICS, this study investigates how metaphors based on domains of JOURNEY, STRUGGLE, TREE and HUMAN AGENCY serve to conceptualize key concepts of Darwin's theory — such as evolutionary change, natural selection, and relationships among organisms. At the outset the author identifies original metaphors in *The Origin of Species*, to turn to their realizations in modern discourse on evolution in later chapters. Thus, the study uncovers how metaphors contribute to structuring the theory by expressing it in a coherent and attractive way, and how they provide mental tools for reasoning. As the first comprehensive study of conceptual metaphors that underlie Darwin's theory and affect the way we talk and think about evolution, it may be of interest not only to linguists and evolutionary biologists but also to anyone interested in the interconnection between thought and language.

Intelligent Systems: Concepts, Methodologies, Tools, and Applications - Management Association, Information Resources 2018-06-04

Ongoing advancements in modern technology have led to significant developments in intelligent systems.

With the numerous applications available, it becomes imperative to conduct research and make further progress in this field. *Intelligent Systems: Concepts, Methodologies, Tools, and Applications* contains a compendium of the latest academic material on the latest breakthroughs and recent progress in intelligent systems. Including innovative studies on information retrieval, artificial intelligence, and software engineering, this multi-volume book is an ideal source for researchers, professionals, academics, upper-level students, and practitioners interested in emerging perspectives in the field of intelligent systems.

The MAP Workbook - Skipi Lundquist Smoot, PhD 2011-07-30

The MAP WORKBOOK, written by Clinical Psychologist, Skipi Lundquist Smoot, PhD has been designed to be used by Readers of *Maturation: The Adult Paradigm* for assessment of personal levels of Psychological Maturity vs. Immaturity. At the core of Psychological Immaturity lies excessive dependency and fear of rejection. The goal of Adult immature behavior is reduction of anxiety. Higher levels of Adult Psychological Maturation occurs through an instructional "process" of Cause & Effect underling human behavior and communication. Dr. Smoot defines Psychological Maturity as a necessary but usually disregarded "Missing Link" for attainment of functional resolution of Anxiety. Personal Growth and Mature relationships (Tasks of Maturation) can occur by adhering to a set of Universal Principles (Laws of Cause & effect) based on "Processes" underlying objective reality. Five Lessons Of Life (Control, Responsibility, Reality, Cognitive Decisions And Moderation) teach methods for making more successful realistic decisions. The Map Workbook can also be used by mental health professionals as well as readers of Self-help literature. The 10 scales of The Map Workbook (taken from The Test of Ego & Cognitive Development) identify and classify areas of functional vs. dysfunction emotional blockage and illogical thought. We are born with a Mission - To explore our own Path. By our attitudes and behaviors we choose to explore it..... or not

Understanding World Regional Geography - Erin H. Fouberg 2017-12-27

Understanding World Regional Geography (UWRG) is a course designed to teach students to think and apply geographic concepts long after the course is over. Author Erin Fouberg draws from her expertise in geography education and research in student learning to create a product that has a strong pedagogical framework designed to engage students and deepen their understanding of the world by having them "DO" Geography. UWRG includes features that help students learn to read cultural and physical landscapes, ask geographic questions, apply geographic concepts, and make connections. It integrates 25 threshold concepts and teaches students how geographers apply these concepts and asks them to apply these concepts themselves. This enables them to grasp the complexities of the world and provides them with the knowledge and thinking skills necessary to understanding it. UWRG is the first introductory course to integrate ESRI ArcGIS Online thematic maps, enabling students to engage with course materials, see patterns, and answer geographic questions.

Bio-inspired Information and Communication Technologies - Yifan Chen 2020

This book constitutes the refereed conference proceedings of the 12th International Conference on Bio-inspired Information and Communications Technologies, held in Shanghai, China, in July 2020. Due to the safety concerns and travel restrictions caused by COVID-19, BICT 2020 took place online in a live stream. BICT 2020 aims to provide a world-leading and multidisciplinary venue for researchers and practitioners in diverse disciplines that seek the understanding of key principles, processes and mechanisms in biological systems and leverage those understandings to develop novel information and communications technologies (ICT). The 20 full and 8 short papers were carefully reviewed and selected from 56 submissions. In addition to the main track targeting broad and mainstream research topics, BICT 2020 includes four special tracks with focused research topics on internet of everything, intelligent internet of things and network applications, intelligent sensor network, and data-driven intelligent modeling, application and optimization. Form and Transformation - Gerald Webster 1996-11-13

Darwin's theory of evolution by natural selection fails to explain the forms of organisms because it focuses on inheritance and survival, not on how organisms are generated. The first part of this 2007 book (by Gerry Webster) looks critically of the conceptual structure of Darwinism and describes the limitation of the theory of evolution as a comprehensive biological theory, arguing that a theory of biological form is needed to understand the structure of organisms and their transformations as revealed in taxonomy. The second part of the book (by Brian Goodwin) explores such a theory in terms of organisms as developing and transforming dynamic systems, within which gene action is to be understood. A number of specific examples, including tetrapod limb formation and Drosophila development, are used to illustrate how these hierarchically-organized dynamic fields undergo robust symmetry-breaking cascades to produce generic forms.

Epistemological Dimensions of Evolutionary Psychology - Thiemo Breyer 2014-11-04

As psychology and philosophy arose as answers to the eternal question of how the mind works, evolutionary psychology has gained ground over recent years as a link between cognitive-behavioral and natural-science theories of the mind. This provocative field has also gathered a wide range of criticisms, from attributing too much autonomy to the brain to basing itself on faulty assumptions about our prehistoric past. Epistemological Dimensions of Evolutionary Psychology reframes its discipline for the contemporary era, correcting common misconceptions and mediating between different schools of thought. By focusing on the nature and limits of knowledge and reasoning--the essence of epistemology--contributors offer fresh insights at the intersection of human cognitive abilities as adaptations and our self-perception of knowledge, including evolutionary perspectives on altruism, depression, or the phasing out of human sacrifice. This diversity strengthens and vindicates the field, as evinced by thought-provoking dispatches such as: Toward a cognitive philosophy of science. Evolutionary media psychology and its epistemological foundation. The "meme" meme revisited. Depression as an adaptation. Like me: a homophily-based account of human culture. Preparedness to learn about the world: evidence from infant research. An engaging and often controversial testament to the combined power of evolution and logic, Epistemological Dimensions of Evolutionary Psychology will intrigue philosophers as well as psychologists in a variety of subdisciplines.

Experiencing Animal Minds - Julie A. Smith 2012-11-27

In these multidisciplinary essays, academic scholars and animal experts explore the nature of animal minds and the methods humans conventionally and unconventionally use to understand them. The collection features chapters by scholars working in psychology, sociology, history, philosophy, literary studies, and art, as well as chapters by and about people who live and work with animals, including the founder of a sanctuary for chickens, a fur trapper, a popular canine psychologist, a horse trainer, and an art photographer who captures everyday contact between humans and their animal companions. Divided into five sections, the collection first considers the ways that humans live with animals and the influence of cohabitation on their perceptions of animals' minds. It follows with an examination of anthropomorphism as

both a guide and hindrance to mapping animal consciousness. Chapters next examine the effects of embodiment on animals' minds and the role of animal-human interembodiment on humans' understandings of animals' minds. Final sections identify historical representations of difference between human and animal consciousness and their relevance to pre-established cultural attitudes, as well as the ways that representations of animals' minds target particular audiences and sometimes produce problematic outcomes. The editors conclude with a discussion of the relationship between the book's chapters and two pressing themes: the connection between human beliefs about animals' minds and human ethical behavior, and the challenges and conditions for knowing the minds of animals. By inviting readers to compare and contrast multiple, uncommon points of view, this collection offers a unique encounter with the diverse perspectives and theories now shaping animal studies.

Key Concepts in Primary Science - Vivian Cooke 2016-03-03

This is essential reading for all primary science trainee and beginning teachers who want to strengthen their science subject knowledge. Each chapter tackles a major theme of the new national curriculum and breaks it down into key concepts. For each concept there is a detailed audit to help readers identify their current levels of knowledge and understanding along with areas for development. This is followed by concise definitions, key terminology, detailed examples and 'in practice' ideas to clearly relate theory to classroom practice. Finally, readers are invited to re-check their understanding and assess their level of competence at the end of each section. The text enables teachers to feel secure in their subject knowledge and confident about effectively conveying that information to their pupils through appropriate subject-specific pedagogy.
