Selbstdarstellung - Sigmund Freud 2017-12-12
Zwei Themen ziehen sich durch diese Arbeit, das meiner Lebensschicksale und das der Geschichte der Psychoanalyse. Sie treten in die innigste Verbindung zueinander. Die Selbstdarstellung zeigt, wie die Psychoanalyse mein Lebensinhalt wird, und folgt dann der berechtigten Annahme, daß nichts, was mir persönlich begegnet ist, neben meinen Beziehungen zur Wissenschaft Interesse verdient.

Elsevier's Dictionary of Psychological Theories - J.E. Roekelein 2006-01-19

In attempting to understand and explain various behaviour, events, and phenomena in their field, psychologists have developed and enunciated an enormous number of ‘best guesses’ or theories concerning the phenomenon in question. Such theories involve speculations and statements that range on a potency continuum from ‘strong’ to ‘weak’. The term theory, itself, has been conceived of in various ways in the psychological literature. In the present dictionary, the strategy of lumping together all the various traditional descriptive labels regarding psychologists ‘best guesses’ under the single descriptive term theory has been adopted. The descriptive labels of principle, law, theory, model, paradigm, effect, hypothesis and doctrine are attached to many of the entries, and all such descriptive labels are subsumed under the umbrella term theory. The title of this dictionary emphasizes the term theory (implying both strong and weak best guesses) and is a way of indication, overall, the contents of this comprehensive dictionary in a parsimonious and felicitous fashion. The dictionary will contain approximately 2,000

terms covering the origination, development, and evolution of various psychological concepts, as well as the historical definition, analysis, and criticisms of psychological concepts. Terms and definitions are in English. *Contains over 2,000 terms covering the origination, development and evolution of various psychological concepts *Covers a wide span of theories, from auditory, cognitive tactile and visual to humor and imagery *An essential resource for psychologists needing a single-source quick reference

Alexander von Humboldt und die Erfindung der Natur - Andrea Wulf 2016-10-11

Was hat Alexander von Humboldt, der vor mehr als 150 Jahren starb, mit Klimawandel und Nachhaltigkeit zu tun? Der Naturforscher und Universalgelehrte, nach dem nicht nur unzählige Straßen, Pflanzen und sogar ein »Mare« auf dem Mond benannt sind, hat wie kein anderer Wissenschaftler unser Verständnis von Natur als lebendigem Ganzen, als Kosmos, in dem vom Winzigsten bis zum Größten alles miteinander verbunden ist und dessen untrennbarer Teil wir sind, geprägt. Die Historikerin Andrea Wulf stellt in ihrem vielfach preisgekrönten – so auch mit dem Bayerischen Buchpreis 2016 – Buch Humboldts Erfindung der Natur, die er radikal neu dachte, ins Zentrum ihrer Erkundungsreise durch sein Leben und Werk. Sie folgt den Spuren des begnadeten Netzwerkers und zeigt, dass unser heutiges Wissen um die

Verwundbarkeit der Erde in Humboldts Überzeugungen verwurzelt ist. Ihm heute wieder zu begegnen, mahnt uns, seine Erkenntnisse endlich zum Maßstab unseres Handelns zu machen – um unser aller Überleben willen. *Handbook of Learning and Cognitive Processes* - W. Estes 2022-07-30

Is it possible at present to identify a core cluster of theoretical ideas, concepts, and methods with which everyone working in the area of learning and cognition needs to be familiar? Would it be possible to make explicit the relationships that we feel do or must exist among the various subspecialties, ranging from conditioning through perceptual learning and memory to psycholinguistics, and to present these in a sufficiently organized way to help specialists and non-specialists alike in relating particular lines of research to the broader spectrum of activity? These questions were posed to a substantial number of investigators who were most active in developing the ideas and doing the research in the early 1970s. Originally published between 1975 and 1978, their response constitutes this 6-volume Handbook of Learning and Cognitive Processes. The volumes survey the research and theory on learning and cognitive processes that were rapidly developing at the time. The primary orientation was to concentrate on research and models aimed toward the development of general cognitive theory. They were up-to-date with regard to theoretical and technical developments, and sufficiently self-contained to be readable by anyone with a reasonable scientific background, regardless of their acquaintance with the technical jargon of particular specialties. Previously out of print, the Handbook is now available again, as a set or as individual volumes.

Handbook of Learning and Cognitive Processes (Volume 2) - William K. Estes 2014-06-20
Originally published in 1975, Volume 2 of this Handbook looks at areas traditionally associated with learning theory such as conditioning, discrimination and behavior theory. It deals with concepts and theories growing principally out of laboratory studies of conditioning and learning. The intention was to treat mechanisms, processes, and principles of some generality – applicable at least to all vertebrates. It was becoming well understood that detailed

interpretations of particular behaviors required the authors to take account of the way general principles operate in the context of species-specific behavioral organizations and developmental histories; but detailed consideration of just how these interpretations were accomplished for different animal forms was another enterprise. Here the authors limit their task to abstracting from the enormous literature facts and ideas which seemed general enough to be of interest and perhaps utility to investigators in other disciplines at the time. Volume 1 presented an overview of the field and introduced the principal theoretical and methodological issues that persistently recurred in the expanded treatments of specific research areas that comprise the later volumes. Volume 3 looks at human learning and motivation, while the last 3 volumes range over the many active lines of research identified with human cognitive processes at the time.
