Sie errichten Canudos, eine Stadt der Freiheit. Doch der Kampf gegen Kamora steht ihnen bevor. Das meistgelesene Buch in Georgien und - zur Zeit sowjetischer Herrschaft geschrieben - eine aufrüttelnde Parabel über das menschliche Dasein in Zeiten gesellschaftlicher und politischer Tyrannei. Intelligent Computer Mathematics - Jacques Carette 2009-07-06  
As computers and communications technology

advance, greater opportunities arise for intelligent mathematical computation. While computer algebra, automated deduction and mathematical publishing each have long and successful histories, we are now seeing increasing opportunities for synergy among them. The Conferences on Intelligent Computer Mathematics (cicm 2009) is a collection of co-located meetings, allowing researchers and practitioners active in these related areas to share recent results and identify the next challenges. The specific areas of the cicm conferences and workshops are described below, but the unifying theme is the computerized handling of mathematical knowledge. The successful formalization of much of mathematics, as well as a better understanding of its internal structure, makes mathematical knowledge in many ways more tractable than general knowledge, as traditionally treated in artificial intelligence. Similarly, we can also expect the problem of

effectively using mathematical knowledge in automated ways to be much more tractable. This is the goal of the work in the cicm conferences and workshops. In the long view, solving the problems addressed by cicm is an important milestone in formulating the next generation of mathematical software.

Distributed Intelligent Systems: A Coordination Perspective comprehensively answers commonly asked questions about coordination in agent-oriented distributed systems. Characterizing the state-of-the-art research in the

field of coordination with regard to the development of distributed agent-oriented systems is a particularly complex endeavour; while existing books deal with specific aspects of coordination, the major contribution of this book lies in the attempt to provide an in-depth review covering a wide range of issues regarding multi-agent coordination in Distributed Artificial Intelligence. Key features: Unveils the lack of coherence and order that characterizes the area of research pertaining to coordination of distributed intelligent systems Examines coordination models, frameworks, strategies and techniques to enable the development of distributed intelligent agent-oriented systems Provides specific recommendations to realize more widespread deployment of agent-based systems

**Besprechungen** - Volker Eismann 2006

Die Reihe Training berufliche Kommunikation wendet sich an Erwachsene, die sich auf ihre Kontakte mit und in deutschsprachigen Unternehmen vorbereiten wollen, dafür aber wenig Zeit haben. Die Kurse sind für 16 bis 24 Unterrichtsstunden konzipiert. Die Bände lassen sich gut allein oder in Kombination miteinander einsetzen, etwa bei Wochenend- und Kompaktkursen, eignen sich aber auch als Ergänzung zu einem Hauptlehrwerk. Die Übungsmodule trainieren anhand von praxisnahen Gesprächssituationen und Fallbeispielen die gängigen Redemittel und typischen Kommunikationssituationen des Berufsalltags. Da die Module ein Thema jeweils abschließend behandeln, können sie auch einzeln und in

beliebiger Reihenfolge bearbeitet werden. Audio-CDs mit gängigen Gesprächsszenarien liegen allen Kursbüchern bei. Neben didaktischen Kommentaren zur Unterrichtsvorbereitung enthalten die Handreichungen zusätzliche Dokumente und Texte mit Aufgabenvorschlägen.

achtsam sprechen - achtsam zuhören - Thich Nhat Hanh  
2014-09-26

Wir alle wollen verstanden werden. Wenn wir reden und niemand uns zuhört, dann kommunizieren wir nicht auf wirksame Weise. Thich Nhat Hanh - Zen-Meister und einer der größten spirituellen Lehrer der Gegenwart - zeigt den buddhistischen Weg auf: Wie wir mit mehr Mitgefühl die zwischenmenschlichen Kontakte verbessern, Missverständnisse vermeiden und lernen, Konflikte friedvoll zu lösen. Er vermittelt zwei bewährte Techniken für ein friedvolles Miteinander: das achtsame Zuhören und das liebevolle Sprechen.

Der berühmteste Schauerroman aller Zeiten Nach Jahren des Experimentierens ist es dem ehrgeizigen Forscher Victor Frankenstein gelungen, einen künstlichen Menschen zu erschaffen. Doch das Ergebnis seiner alchemistischen Versuche erschüttert ihn bis ins Mark, und entsetzt überlässt er das Wesen seinem Schicksal. Während dieses verzweifelt nach Nähe und Akzeptanz sucht, hinterlässt es Chaos und Verwüstung ... Darf künstliche Schöpfung über die natürliche gestellt werden? Welcher moralischen Verantwortung unterliegen wir Menschen? Mit ihrem Erstlingswerk griff die 19-jährige Mary Shelley bereits 1818 grundlegende Fragen auf,

**Intelligent Spaces** - Alan Steventon 2010-05-30

This book sets out a vision of pervasive IT through intelligent spaces and describes some of the progress that has been made towards its realisation. The context for intelligent spaces (or iSpaces) is the world where information and communication technology (ICT) disappears as it becomes embedded into physical objects and the spaces in which we live and work. The ultimate vision is that this embedded technology provides us with intelligent and contextually relevant support, augmenting

our lives and our experience of the physical world in a benign and non intrusive manner. The enormous advances in hardware, system design, and software that are being achieved enable this vision. In particular, the performance advances and cost reductions in hardware components - processors, memory, storage, and communications - are making it possible to embed intelligence and communications ability into lower cost objects. The Internet is a living experiment in building complex, distributed systems on a global scale. In software, there have been solid advances in creating systems that can deal with complexities on the scale required to interact with human activity, in limited domains at least. The ultimate vision is challenging, and there are many obstacles to its realisation.

### **Advanced Technologies Applied to Training Design -**

Robert J. Seidel 2012-12-06

This collection of papers is the result of a workshop sponsored by NATO's Defense Research Group Panel 8 in the Fall of 1991. The workshop is the second of a series, the first of which was held in the Spring of 1985. As you study these papers, recall that this workshop occurred during the time that many changes were occurring in Eastern Europe and world wide. The need to identify training technologies for maintaining a capable and ready force during times of decreases in military force structure was, and is currently, our challenge. The opportunities for these technologies to provide a service and opportunity for nonmilitary usage is our future.

Therefore this workshop maintained its focus on technology and application, regardless of the user. These and other statements made herein are personal and reflect the opinions of the author(s) and in no way represent the official position or policy of our individual governments. v

**PREFACE** The truly international contributions to this book reinforced our belief that training technology must be collaborative and data widely shared to strengthen our future. We want to thank the authors of these papers for their abilities to see beyond the near horizon. Their contributions, and the support of the organizations that sponsored their work is greatly appreciated. We also gratefully recognize the contributions of all who attended the workshop. *Vorsprung - 2016*

*Next Generation Information System Technology* - Joachim W. Schmidt 1991-06-26

Currently, the field of information systems technology is rapidly extending into several dimensions. There is the semantic dimension (including object orientation, data deduction and extended knowledge representation schemes), there is improved systems integration, and there are new tools. All these extensions aim to provide semantically richer and better engineered information systems that allow for more adequate and complete representations and thus extend the effective use of database technology to a wider class of applications. Database researchers and developers, whether they are committed to application or to system

construction, are convinced that next-generation information system technology will be heavily determined by a handful of new concepts that they have to understand and work out in detail now. This volume concentrates on the following topics: - Extended data types and data models, database programming languages; - Rule-based data deduction, expert systems, knowledge bases; - Object orientation and semantic data modelling; - DB application development, methodologies and tools; - Interface technology, parallelism, interoperability, ...; - New database applications.
