A revision of the genus Arenivaga (Rehn) (Blattodea, Corydiidae), with descriptions of new species and key to the males of the genus - Heidi Hopkins 2014-02-26

The Corydiidae (Polyphagidae, sensu lato) is a family of extremo-ophile cockroaches that have received little taxonomic attention. Their cryptic subterranean way of life in some of the most inhospitable parts of the planet makes the study of this group particularly difficult. *Arenivaga* (Rehn) is a genus of Corydiid cockroach endemic to the American Southwest, Florida, and Mexico. This unusual group of insects, not examined in nearly a century, is revised in this volume. This work includes redescriptions of the genus and its nine known species, descriptions of 39 new species, a key to the adult males, and distribution maps for each species. A photographic series of the habitus and detailed drawing of the genitalia of each species are also

provided, and novel morphological characters are described. In addition, the locality data of more than 5000 specimens used in this study is now available to researchers. Even though this research increases the number of species in Arenivaga five-fold, there is little doubt that there are many more species to be found in Mexico, which is poorly surveyed in comparison to the US terrain.

Integument, Respiration and Circulation - G. A. Kerkut 2013-10-22
This volume is primarily devoted to the analysis of the integument (epidermis, cuticle), the fat body, the connective tissues, the circulatory and

respiratory systems. It discusses the organization and functioning of the insect systems implicated in growth, intermediary metabolism, homeostasis and defence mechanisms. Much of the volume is devoted to anatomical and structural developments, which appear as introductions to corresponding biochemical and physiological aspects. Many diagrams, drawings and photographs accompany the text throughout. Altogether, this volume presents a clear and up-to-date account of the most recent and important discoveries in the fields and shows the extent of progress which is expected in the near future.

[A Guide to the Cockroaches of Australia](#) - David Rentz 2014-05-29

Cockroaches! Even a mere mention of the word causes many people to recoil in horror. However, of the hundreds of species of

cockroaches (or blattodeans as they are known) found in Australia, only a small number of them give the group a bad name. Just a few species that are commonly found in homes, restaurants and hospitals are responsible for thousands of dollars in expenditure to comply with health standards. A Guide to the Cockroaches of Australia is a comprehensive account of most of the 550 described species found in Australia. The book reveals their diversity and beauty, it looks in detail at their morphology, habitats and ecology, and explains how to collect and preserve them. Importantly, it will allow pest controllers, students and researchers to reliably identify most of the common pest species as well as the non-pest cockroaches. It will also, perhaps, go some way towards elevating the reputation of these much-maligned insects, and promote further study of them. 2014 Whitley Award Commendation for Field Guide.

Structure and Evolution of Invertebrate Nervous Systems - Andreas Schmidt-Rhaesa

2015-12-17

The nervous system is particularly fascinating for many biologists because it controls animal characteristics such as movement, behavior, and coordinated thinking. Invertebrate neurobiology has traditionally been studied in specific model organisms, whilst knowledge of the broad diversity of nervous system architecture and its evolution among metazoan animals has received less attention. This is the first major reference work in the field for 50 years, bringing together many leading evolutionary neurobiologists to review the most recent research on the structure of invertebrate nervous systems and provide a comprehensive and authoritative overview for a new generation of researchers. Presented in full colour throughout, *Structure and Evolution of Invertebrate Nervous Systems* synthesizes and illustrates the numerous new findings that have been made possible with light and electron microscopy. These include the recent introduction of new molecular and optical

techniques such as immunohistochemical staining of neuron-specific antigens and fluorescence in-situ-hybridization, combined with visualization by confocal laser scanning microscopy. New approaches to analysing the structure of the nervous system are also included such as micro-computational tomography, cryo-soft X-ray tomography, and various 3-D visualization techniques. The book follows a systematic and phylogenetic structure, covering a broad range of taxa, interspersed with chapters focusing on selected topics in nervous system functioning which are presented as research highlights and perspectives. This comprehensive reference work will be an essential companion for graduate students and researchers alike in the fields of metazoan neurobiology, morphology, zoology, phylogeny and evolution.

Politics of the Self - Richard W. McCormick
2014-07-14

Richard McCormick examines the concepts of postmodernity and postmodernism as they apply to West Germany, discussing them against the background of cultural and political upheaval in that country since the 1960s, rather than exclusively in the more familiar setting of intellectual history. Considering six literary and cinematic texts that are marked by a preoccupation with the self and subjectivity, he underscores the crucial influence of feminism on writers and filmmakers--and on the "postmodern." In a broad international context he describes the conflicting forces that affected the West German student movement--the rationalistic tradition of the Weimar Left and more "irrational" influences such as French existentialism and surrealism (as well as the American "Beat" movement and rock & roll)--and shows how these forces played themselves out so that dogmatic Marxist Leninism was repudiated in favor of a "New Subjectivity.". At the center of the discussion are the novels Lenz

by Peter Schneider, *Class Love (Klassenliebe)* by Karin Struck, and *Devotion* by Botho Strauss, and the films *Wrong Move* written by Peter Handke and directed by Wim Wenders, Germany, *Pale Mother* by Helma Sanders-Brahms, and *The Subjective Factor* by Helke Sander. The author shows how ongoing attempts to attack the separation of emotion from reason, life from art, the private from the public, and the personal from the political brought about changes in outlook, from the 1960s to the early 1980s, that are related to the rise of new political movements--ecology, nuclear disarmament, and feminism. [Atlas of Comparative Sectional Anatomy of 6 invertebrates and 5 vertebrates](#) - Géza Zboray
2011-02-04

This atlas contains 189 coloured images taken from transversal, horizontal and sagittal sections of eleven organisms widely used in university

teaching. Six invertebrate and five vertebrate species – from the nematode worm (*Ascaris suum*) to mammals (*Rattus norvegicus*) – are shown in detailed images. Studying the macrosections with unaided eyes, with a simple magnifier or binocular microscope might be of great help to accomplish traditional anatomical studies and to establish a certain spatial experience/space perception. This volume will be of great interest for biology students, researchers and teachers of comparative anatomy. It might act as supporting material of practical courses. Furthermore, medical practitioners, agricultural specialists and researchers having an interest in comparative anatomy might also benefit from it.

Nerve Cells and Animal Behaviour - Peter

Simmons 2010-05-27

An extensively revised third edition of this introduction to neuroethology - the neuronal basis of animal behaviour - for zoology, biology and psychology undergraduate students. The book focuses on the roles of individual nerve cells in behaviour, from simple startle responses to complex behaviours such as route learning by rats and singing by crickets and birds. It begins by examining the relationship between brains and behaviour, and showing how study of specialised behaviours reveals neuronal mechanisms that control behaviour. Information processing by nerve cells is introduced using specific examples, and the establishing roles of neurons in behaviour is described for a predator-prey interaction, toads versus cockroaches. New material includes: vision by insects, which describes sensory filtering; hunting by owls and bats, which describes sensory maps; and rhythmical movements including swimming and flying, which describes how sequences of

movements are generated. Includes stunning photographs which capture the detail of the behaviour.

Bedroom Beats & B-sides - Laurent Fintoni
2020-09

The first decades of the 21st century saw dramatic changes in the music industry as new technology transformed creation, communication, and consumption. Amid this turmoil one change occurred relatively quietly, almost naturally: so-called bedroom producers, music makers raised on hip-hop and electronic music, went from anonymous, often unseen creators to artists in their own right. In *Bedroom Beats & B-sides: Instrumental Hip Hop & Electronic Music at the Turn of the Century*, Laurent Fintoni details the rise of a new generation of bedroom producers at the turn of the century through the stories of various instrumental hip-hop and electronic music scenes. From trip-hop, jungle, illbient, and IDM in the 1990s to just "beats" in the late 2000s, the

book explores how these scenes acted as incubators for new ideas about composition and performance that are now taken for granted. Combining social, cultural, and musical history with extensive research, the book tells the B-side stories of hip-hop and electronic music from the 1990s to the 2010s and explores the evolution of a modern beat culture from local scenes to a global community via the diverse groups of fringe idealists who made it happen and the external forces that shaped their efforts. Includes quotes and stories drawn from more than 100 interviews with producers, DJs, label owners, and more including James Lavelle, Charlie Dark, Luke Vibert, Mark Pritchard, Flying Lotus, Georgia Anne Muldrow, El-P, Hudson Mohawke, Kode9, Prefuse 73, Anti Pop Consortium, Dabrye, Waajeed, Tekilatex, Ghislain Poirier, Kutmah, LuckyMe, Benji B, The Bug, and many more. *Bedroom Beats & B-sides* is the first comprehensive history of the instrumental hip-hop and electronic scenes and

a truly global look at a thirty-year period of modern music culture based on a decade of research and travel across Europe, North America, and Japan.
