Based entirely on using Microsoft Excel rather than more complicated applications, it includes a clear guide to using Excel with the key functions employed in the book, a glossary of terms and equations, plus a section specifically for those readers who feel rusty in basic maths. Excel 2016 for Social Science Statistics - Thomas J. Quirk 2016-08-10

This book shows the capabilities of Microsoft Excel in teaching social science statistics effectively. Similar to the previously published Excel 2013 for Social Sciences Statistics, this book is a step-by-step exercise-driven guide for students and practitioners who need to master Excel to solve practical social science problems. If understanding statistics isn't your strongest suit, you are not especially mathematically-inclined, or if you are wary of computers, this is the right book for you. Excel, a widely available computer program for students and managers, is also an effective teaching and learning tool for quantitative analyses in social science courses. Its powerful computational ability and graphical functions make learning statistics much easier than in years past. However, Excel 2016 for Social Science Statistics: A Guide to Solving Practical Problems is the first book to capitalize on these improvements by teaching students and managers how to apply Excel to statistical

techniques necessary in their courses and work. Each chapter explains statistical formulas and directs the reader to use Excel commands to solve specific, easy-to-understand social science problems. Practice problems are provided at the end of each chapter with their solutions in an appendix. Separately, there is a full Practice Test (with answers in an Appendix) that allows readers to test what they have learned. Includes 167 illustrations in color Suitable for upper undergraduates or graduate students At the beginning of his academic career, Prof. Tom J. Quirk spent six years in educational research at The American Institutes for Research and Educational Testing Service. He then taught Social Psychology, Educational Psychology, General Psychology, Marketing, Management, and Accounting at Principia College, and is currently a Professor of Marketing in the George Herbert Walker School of Business & Technology at Webster University based in St. Louis, Missouri (USA) where he teaches Marketing Statistics, Marketing Research, and Pricing Strategies. He has written 60+ textbook supplements in Marketing and Management, published 20+ articles in professional journals, and presented 20+ papers at professional meetings. He holds a B.S. in Mathematics from John Carroll University, both an M.A. in Education and a Ph.D. in Educational Psychology from Stanford University, and an M.B.A. from The University of Missouri-St. Louis.

ASTD Handbook for Measuring and Evaluating Training - Patricia Pulliam Phillips 2010

Learning professionals have a love-hate relationship with measurement and evaluation.

On one hand, most people agree that evaluation and the evolving results can represent important information. On the other hand, the act of evaluation seems daunting and beyond their interest in learning and development. But there is no arguing that the call for accountability of resource expenditures is louder than ever. To support learning professionals as they answer this call, ASTD is launching a new handbook, *Handbook of Measuring and Evaluating Training*. This new book addresses the mechanics of evaluation from the perspective of a variety of contributors. It addresses content relevant to the four phases of measurement and evaluation: planning, data collection, data analysis, and reporting. In addition, chapters are included that support implementation of your measurement practice. Each chapter is written to achieve at least three learning objectives. A knowledge check is included at the end of each chapter to ensure readers gain at least one new insight.

abstracts-as well as by broad subject areas including government, statistics and data, health, and legal information. This second part introduces the tools and resources that reference professionals use to provide the services described in the first half of the text. *Reference and Information Services* is a recognized textbook for information retrieval courses and updates the previous edition.
