Indian Architectural Theory - Vibhuti Chakrabarti 1998

In this ground-breaking study the traditional Indian science of architecture and house-building, Vastu Vidya, is explored in terms of its secular uses, at the levels of both theory and contemporary practice. Vastu Vidya is treated as constituting a coherent and complete architectural programme, still of great relevance today. Chakrabarti draws on an impressive amount of textual material, much of it only available in Sanskrit, and presents several extremely valuable illustrations in support of the theories expounded. Each chapter deals with one architectural aspect, and chapters are divided into three sections. For each aspect, the first section explains the prescriptions of the traditional texts; the second section deals with the rather arbitrary use of that aspect by contemporary Indian architects trained in the western manner but striving to relate to Indian roots; while the last section in each chapter explores the selected use of that particular aspect by contemporary Vastu pundits, with their disregard for architectural idiom

Courtyard Housing for Health and Happiness - Donia Zhang 2016-03-09

Health and happiness are fundamental to human quality of life. The United Nations World Happiness Report 2012 reflects a new worldwide call for governments to include happiness as a criterion to their policies. The Healthy Cities or Happy Cities movement has been endorsed by the WHO since 1986, and a Healthy House or Happy Home is a critical constituent of a healthy city or a happy city. Nevertheless, the concept has not been fully explored. Existing literature on the healthy house has often focused on the technical, economic, environmental, or biochemical aspects, while current scholarship on the happy home commonly centers on interior decoration. Few studies have addressed the importance of social and cultural factors that affect the health and happiness of the occupants. Identifying four key themes in Chinese philosophy to promote health and happiness at home, this book links architecture with Chinese philosophy, social sciences, and the humanities, and in doing so, argues that Architectural Multiculturalism is a vital ideology to guide housing design in North America. Using both qualitative and quantitative evidence gathered from ethnic Chinese and non-Chinese living in the USA and Canada, the study proposes that the Courtyard is a central component to promote social and cultural health and happiness of residents. It further details courtyard garden house design strategies that combine a sense of privacy with a feeling of community as represented in courtyard housing. The schemes may have universal implications.

Designing the British Post-War Home - Fiona Fisher 2015-04-10

In Designing the British Post-War Home Fiona Fisher explores the development of modern domestic architecture in Britain through a detailed study of the work of the successful Surrey-based architectural practice of Kenneth Wood. Wood's firm is representative of a geographically distinct category of post-war architectural and design practice - that of the small private practice that flourished in Britain's expanding suburbs after the removal of wartime building restrictions. Such firms, which played an important role in the development of British domestic design, are currently under-represented within architectural histories of the period. The private house represents an important site in which new spatial, material and aesthetic parameters for modern living were defined after the Second World War. Within a British context, the architect-designed private house remained an important 'vehicle for the investigation of architectural ideas' by second generation modernist architects and designers. Through a series of case study houses, designed by Wood's firm, the book reconsiders the progress of modern domestic architecture in Britain and demonstrates the ways in which architectural discourse and practice intersected with the experience, performance and representation of domestic modernity in post-war Britain.

Bayana - Shokoohy Mehrdad Shokoohy 2020-03-18

Bayana in Rajasthan, and its monuments, challenge the perceived but established view of the development of Muslim architecture and urban form in India. At the end of the twelfth century, early conquerors took the mighty Hindu fort, building the first Muslim city below on virgin ground. They later reconfigured the fort and constructed another town within it. These two towns were the centre of an autonomous region during the fifteenth and sixteenth centuries. Going beyond a simple study of the historic, architectural and archaeological remains, this book takes on the wider issues of how far the artistic traditions of Bayana, which developed independently from those of Delhi, later influenced north Indian architecture. It shows how these traditions were the forerunners of the Mughal architectural style, which drew many of its features from innovations developed first in Bayana.
