Fleeting Footsteps - Lay Yong Lam 2004

The Hindu-Arabic numeral system (1, 2, 3, ...) is one of mankind's greatest achievements and one of its most commonly used inventions. How did it originate? Those who have written about the numeral system have hypothesized that it originated in India; however, there is little evidence to support this claim. This book provides considerable evidence to show that the Hindu-Arabic numeral system, despite its commonly accepted name, has its origins in the Chinese rod numeral system. This system was widely used in China from antiquity till the 16th century. It was used by officials, astronomers, traders and others to perform addition, subtraction, multiplication, division and other arithmetic operations, and also used by mathematicians to develop arithmetic and algebra. Based on this system, numerous mathematical treatises were written. Sun Zi suanjing (The Mathematical Classic of Sun Zi), written around 400 A.D., is the earliest existing work to have a description of the rod numerals and their operations. With this treatise as a central reference, the first part of the book discusses the development of arithmetic and the beginnings of algebra in ancient China and, on the basis of this knowledge, advances the thesis that the Hindu-Arabic numeral system has its origins in the rod numeral system. Part Two gives a complete translation of Sun Zi suanjing. In this revised edition, Lam Lay Yong has included an edited text of her plenary lecture entitled "Ancient Chinese Mathematics and Its Influence on World Mathematics", which was delivered at the International Congress of Mathematicians, Beijing 2002, after she received the prestigious Kenneth O. May Medal conferred by the International Commission on the History of Mathematics. This should serve as a useful and easy-to-comprehend introduction to the book.

The Psychology of Reading - Insup Taylor 2013-09-17

The Psychology of Reading provides a fair and coherent overall picture of how reading is done and how it is best taught. It aims to relate reading to writing systems, analyze the process of reading from several viewpoints using research from diverse disciplines, and develop a model of reading to explain reading processes all the way from letter recognition to reading whole texts. The book describes how children learn to read in different scripts, by different methods, and at different ages. It discusses

different components of reading—eye movements, letter and word recognition, sentence and prose reading, and so on, in beginning readers, in skilled or unskilled readers, as well as dyslexic readers. Brain-damaged patients with selective impairment of different components provide a "natural laboratory" to compare reading processes within one script as well as across different scripts. The more types of readers, scripts, and components examined, the better the picture of reading processes drawn. This book is a text for college students as well as a reference book for professionals in psychology, education, linguistics, and other related fields.

Handbook of Cannabis - Roger Pertwee 2014-08-21

Truly global in scope and with contributions from leading researchers around the world, The Handbook of Cannabis is the definitive resource on this fascinating drug. Combining scientific perspectives and clinical applications, it covers a vast array of topics, from why over the centuries cannabis has been used as a medicine, through the regulations facing those wishing to self-administer cannabis or provide cannabis-based medicines, to the chemical structure of its many constituents and the rapidly growing group of synthetic cannabinoids that are currently being used for 'legal highs'. With each chapter written by a group of one or more internationally recognised subject experts, it provides academics and researchers with authoritative scientific material on the main pharmacological actions and their effects, as well as their pharmacokinetics, metabolism, and forensic detection. In addition it also examines the complex morphology, cultivation, harvesting, and processing of cannabis and the ways in which the plant's chemical composition can be controlled. As well as offering a raft of scientific information there is extensive coverage of cannabinoid-based medicines. Helping readers to identify and evaluate their benefits, chapters explore pharmacological actions and the effects that seem to underlie approved therapeutic uses, how they are currently used to treat certain disorders, and the ever-growing number of wide-ranging potential clinical applications. There is also coverage of both the legal and illegal sources of cannabis, including 'coffee shops' and 'cannabis dispensaries'. The complex issue of 'recreational cannabis' is also tackled. The sought-after and adverse psychological and non-psychological effects are described and discussions are included on how some adverse effects can be lessened by at least one constituent of cannabis, and that it might be possible to reduce the harm that cannabis does to some by changing current regulatory policies. The Handbook of Cannabis is a one-stop reference; essential reading for all clinicians, pharmacologists, psychologists, and psychiatrists interested in this drug, as well as those working in the field of public health.

TIMSS 2007 - Wilfried Bos 2008

Im Jahr 1995 beteiligte sich Deutschland erstmals mit TIMSS (Third International Mathematics and Science Study) an einer international vergleichenden Schulleistungsstudie. Untersucht wurden damals die mathematischen und naturwissenschaftlichen Kompetenzen in den Sekundarstufen I und II. Die Resonanz auf die Ergebnisse war erheblich, denn die Leistungen der Schülerinnen und Schüler befanden sich im internationalen Vergleich nicht - wie erwartet - an der Spitze. Eine Folge

davon war die regelmäßige deutsche Beteiligung an internationalen Schulleistungsstudien im letzten Jahrzehnt. Mit TIMSS 2007 (Trends in International Mathematics and Science Study) nimmt Deutschland erstmalig an einem grundständigen internationalen Vergleich der Grundschulen in den Bereichen Mathematik und Naturwissenschaften teil. Ein internationaler Kreis von Experten hat Tests entwickelt, die die nationalen Curricula der Teilnehmerstaaten berücksichtigen. Unter Bezugnahme auf verschiedene Inhaltsgebiete und kognitive Anforderungsbereiche wird so ein detaillierter Blick auf die Leistungsfähigkeit der Grundschulen der verschiedenen Staaten möglich. Practical SGML - Eric van Herwijnen 1994-04-30

Since the initial publication of Practical SGML the computer industry has seen a dramatic increase in the use and acceptance of SGML and many of the concepts derived from it. The existence of Practical SGML has helped to foster this growth as it provides a practical and vital introduction to the many facets of SGML and how it fits into an organization, whether it be business or government. Practical SGML, Second Edition is an extensive revision and update that puts greater emphasis and focus on helping the novice work his or her way through the vast amounts of information required to become proficient in SGML. Practical SGML, Second Edition provides the reader with an understanding of: the tools currently on the market that enable the easy creation of SGML data and the use and distribution of that data in a variety of forms; the minimum amount of information needed by people who wish to understand and use ISO 8879; aids and information on how to stay current with the volumes of material written on SGML in publications throughout the world; practical examples of the many SGML constructs and guidelines on their appropriate uses; other helpful hints and insights based on years of working with the standard and integrating it into a complex and challenging computer environment. Exercises throughout the text allow the readers to test their understanding. Answers are given in Appendix A. Practical SGML, Second Edition is an invaluable reference manual for anyone interested in understanding and using SGML.

Mathematics Achievement in the Middle School Years - Albert E. Beaton 1996

The Third International Mathematics and Science Study (TIMSS) is the largest and most ambitious study undertaken by the International Association for the Evaluation of Educational Achievement. Forty-five countries collected data in more than 30 languages. Five grade levels were tested in the two subject areas, so that more than half a million students were tested around the world. This report addresses middle-school mathematics achievement (grades seven and eight) in six content areas: (1) fractions and number sense; (2) measurement; (3) proportionality; (4) data representation, analysis, and probability; (5) geometry; and (6) algebra. Results cover 41 countries with complete data collection. Singapore was the top-performing country at both grade levels, with Korea, Japan, and Hong Kong also performing very well. There were large differences in average achievement between top performers and bottom performing nations. Gender differences in mathematics achievement were small or nearly nonexistent in most countries, but when they did appear, they favored boys. In nearly every country there was a strong positive relationship between student enjoyment of mathematics and higher achievement. Home factors were strongly related to mathematics achievement in every participating country, but relationships between instructional variables and achievement were less clear. In every country, the pattern was for the eighth grade student whose parents had more education to also have higher achievement in mathematics. The amount of television viewing was negatively associated with mathematics achievement. The

document's introduction provides information on each country's characteristics including demographics, public expenditures on education, organization of educational system. Chapters address: (1) International Student Achievement in Mathematics; (2) Average Achievement; (3) Performance on Items within Each Mathematics Content Area; (4) Students Backgrounds and Attitudes towards Mathematics; and (5) Teachers and Instruction. Appendixes include: Overview of TIMSS Procedures; Test-Curriculum Matching Analysis; Selected Mathematics Achievement Eighth-Grade Results for the Philippines, Denmark, Sweden, and German-Speaking Switzerland; and Percentiles and Standard Deviations of Mathematics Achievement. Predicting the Performance of Multistage Separation Processes, Second Edition - Fouad M. Khoury 1999-10-15

Multistage separation processes are essentially the heart and soul of the petroleum, petrochemical, and chemical industries. They yield products as common as gasoline and plastics and those as specialized as medical-grade pharmaceuticals. Predicting the Performance of Multistage Separation Processes provides chemical engineers with solid information and insights into these processes. It reaches beyond fundamental principles to focus on intuitive understanding and practical interpretation. To that end, it presents numerous examples from a variety of applications, effectively demonstrating the performance of processes under varying conditions and the relationship among the different operating variables. With major advances in computational techniques for solving complex multistage separation equations, a variety of simulation programs have emerged that allow accurate and efficient prediction of multistage separation processes. These are valuable and effective tools, but are often hampered by a lack of understanding of the fundamentals and limitations of prediction techniques. The author addresses these problems and pursues a strategy that decouples the discussion of conceptual analysis and the computational techniques. Although Dr. Khoury presents mathematical methods in detail, he gives special attention to keeping the practical interpretation of the models in focus and emphasizes intuitive understanding. He applies graphical techniques and shortcut methods wherever possible and includes industrial practice heuristics about the ranges of operating variables that will work. With its updates and the addition of more than 100 new applications problems and solutions, Predicting the Performance of Multistage Separation Processes, Second Edition is ideal for a methodical study of separation processes and as a reference for the fundamental principles and shortcuts useful to the working professional.

International Monetary Fund Annual Report 2014 - International Monetary Fund. Secretary's Department 2014-10-03

Seven years after the onset of the global financial crisis, the world still has a way to go to secure a sustainable recovery marked by strong growth that supports rapid job creation and benefits all, International Monetary Fund (IMF) Managing Director Christine Lagarde says in her foreword to the institution's Annual Report 2014—From Stabilization to Sustainable Growth, published today. "The recovery is ongoing, but it is still too slow and fragile, subject to the vagaries of financial sentiment. Millions of people are still looking for work. The level of uncertainty might be diminishing, but it is certainly not disappearing." Ms. Lagarde said that "throughout the crisis and in the recovery period, the IMF has been, and continues to be, an indispensable agent of economic cooperation" for its membership. The report covers the work of the IMF's Executive Board and contains financial statements for the year May 1, 2013, to April 30, 2014. It describes the IMF's support for its 188 member countries, with an emphasis on the core areas of IMF responsibility: assessing their economic and financial policies, providing financing where needed, and building capacity in key areas of economic policy.

Making Waves - M Goss 2013-07-10

This book is an abbreviated, partly re-written version of "Under the Radar - The First Woman in Radio Astronomy: Ruby Payne-Scott." It addresses a general readership interested in historical and sociological aspects of astronomy and presents the biography of Ruby Payne-Scott (1912 - 1981). As the first female radio astronomer (and one of the first people in the world to consider radio astronomy), she made classic contributions to solar radio physics. She also played a major role in the design of the Australian government's Council for Scientific and Industrial Research radars, which were in turn of vital importance in the Southwest Pacific Theatre in World War II. These radars were used by military personnel from Australia, the United States and New Zealand. From a sociological perspective, her career offers many examples of the perils of being a female academic in the first half of the 20th century. Written in an engaging style and complemented by many historical photographs, this book offers fascinating insights into the beginnings of radio astronomy and the role of a pioneering woman in astronomy. To set the scene, the first colourfully illustrated chapter presents an overview of solar astrophysics and the tools of the radio astronomer. From the reviews of "Under the Radar": "This is a beautifully-researched, copiously-illustrated and well-written book that tells us much more than the life of one amazing female radio astronomer. It also provides a profile on radar developments during WWII and on Australia's pre-eminent place in solar radio astronomy in the years following WWII. Under the Radar is compelling reading, and if you have taken the time to read right through this review then it certainly belongs on your bookshelf!" Proposals for safeguarding good scientific practice - Deutsche Forschungsgemeinschaft 1998

A case of scientific misconduct that was widely discussed in public both in Germany and abroad has led the Executive Board of the Deutsche Forschungsgemeinschaft to appoint an international commission to explore causes of dishonesty in science systems to discuss preventive measures to examine the existing mechanisms of professional self regulation in science and to make recommendations on how to safeguard them. As a result of its deliberations, the commission puts forward the recommendations covered in this book. The accompanying justification and commentary contain suggestions for their implementation. They are followed by a short overview of the problems in the scientific system discussed by the commission, and of institutional regulations in other countries which were helpful for drawing up these recommendations. *ERIC Educational Documents Index, 1966-69: Minor descriptors and author index* - 1970
