Concise Encyclopedia of Computer Science - Edwin D. Reilly 2004-09-03
The Concise Encyclopedia of Computer Science has been adapted from the full Fourth Edition to meet the needs of students, teachers and professional computer users in science and industry. As an ideal desktop reference, it contains shorter versions of 60% of the articles found in the Fourth Edition, putting computer knowledge at your fingertips. Organised to work for you, it has several features that make it an invaluable and accessible reference. These include: Cross references to closely related articles to ensure that you don't miss relevant information Appendices covering abbreviations and acronyms, notation and units, and a timeline of significant milestones in computing have been included to ensure that you get the most from the book. A comprehensive index containing article titles, names of persons cited, references to sub-categories and important words in general usage, guarantees that you can easily find the information you need. Classification of articles around the following nine main themes allows you to follow a self study regime in a particular area: Hardware Computer Systems Information and Data Software Mathematics of Computing Theory of Computation Methodologies Applications Computing Milieux. Presenting a wide ranging perspective on the key concepts and developments that define the discipline, the Concise Encyclopedia of Computer Science is a valuable reference for all computer users.

THE PHENOMENOLOGICAL STUDY OF THE LOST GENERATION OF SUDAN - Elias Rinaldo Gamboriko, AJ. Ph.D 2015-01-14

The purpose of this study was to examine the situation of the lost girls and boys of Sudan and to identify the effects of civil war in the country. The effects of war in the country left most Sudanese traumatized in refugee camps, while a few managed to relocate to the United States and

settle in South Dakota. Through this study, some of the lived experiences of several lost girls and boys who have suffered psychologically and socially as a result of being exposed to civil war and being forced to relocate to the United States have been identified. The degree to which these Sudanese immigrants' current lives in the U.S. are affected by what they witnessed and experienced, as well as the extent to which their treatment was helpful in restoring their mental health, was also examined. Information from the interviews showed that each of the experiences of these young men and women were unique and that each immigrant coped with their experiences differently. One conclusion drawn from the study was that a majority of the support for these new immigrants should be given to those individuals who are 18 or older when they arrive.

The Path of Speech Technologies in Computer Assisted Language Learning - Melissa Holland 2008-02-08

This collection examines the promise and limitations for computer-assisted language learning of emerging speech technologies: speech recognition, text-to-speech synthesis, and acoustic visualization. Using pioneering research from contributors based in the US and Europe, this volume illustrates the uses of each technology for learning languages, the problems entailed in their use, and the solutions evolving in both technology and instructional design. To illuminate where these technologies stand on the path from research toward practice, the book chapters are organized to reflect five stages in the maturation of learning technologies: basic research, analysis of learners' needs, adaptation of technologies to meet needs, development of prototypes to incorporate adapted technologies, and evaluation of prototypes. The volume demonstrates the progress in employing each class of speech technology while pointing up the effort that remains for effective, reliable application to language learning.

Access 2007 et VBA - Bernard Minot 2008

Ce livre, qui porte sur la dernière version d'Access, présente toutes les étapes de la conception de bases de données de taille moyenne. Il explique également comment réaliser des interfaces graphiques de saisie et de visualisation. Les premiers chapitres traitent de la modélisation des données, de la conception de tables grâce à l'interface graphique d'Access, et de l'échange de données avec d'autres applications, telles qu'Excel. Les chapitres suivants présentent les requêtes SQL, les formulaires et les états, ainsi que les macros et la programmation en langage VBA. Comprend de nombreux exemples et exercices corrigés. Ce livre s'adresse en premier lieu aux étudiants de premier cycle, aux étudiants en IUT et en BTS. Il sera également utile aux PME désirant créer leurs propres bases de données.

Practical Aspects of Declarative Languages - Shriram Krishnamurthi 2003-06-30

Declarative languages build on sound theoretical bases to provide attractive frameworks for application development. These languages have been successfully applied to a wide variety of real-world situations including database management, active networks, software engineering, and decision-support systems. New developments in theory and implementation expose fresh opportunities. At the same time, the application of declarative languages to novel problems raises numerous interesting research issues. These well-known questions include scalability, language extensions for application deployment, and programming environments. Thus, applications drive the progress in the theory and implementation of declarative systems, and in turn benefit from this progress. The International Symposium on Practical Applications of Declarative Languages (PADL) provides a forum for researchers, practitioners, and implementors of declarative languages to exchange ideas on current and novel applications and on the requirements for effective use of declarative systems. The fourth PADL symposium was held in Portland, Oregon, on January 19 and 20, 2002.

Histoire illustrée de l'informatique - Emmanuel Lazard 2019-11-14
Comment fut inventé l'ordinateur ? Comment notre monde s'est-il numérisé ? Qui sont les héros de cette aventure ? Comment s'inscrit-elle dans l'évolution de l'humanité ? Connaître l'histoire de l'informatique relève désormais de la culture générale. De la machine d'Anticythère au cyberespionnage et aux Big Data, des cartes perforées à l'Internet, des tabultrices aux tablettes, ce livre vous propose un voyage dans le temps, une archéologie de notre environnement numérique. Laissez-vous emporter dans cette lecture fabuleuse, où chacun retrouvera ou découvrira ces merveilleuses créations de l'esprit humain.

Language Science and Language technology in Africa - Steve Ndinga-Koumba-Binza 2012-10-01

This book provides a broad overview of current work on South African languages, language resources and language technologies. While it provides a fairly comprehensive overview, it also ties together the most recent knowledge state here, and is therefore truly innovative ? The book is therefore informed by current international trends in the respective fields of science, and feeds back into them ? There is absolutely no doubt that the book has an academic peer audience and is directed at specialists in the field. - Prof. Axel Fleisch, University of Helsinki, Finland

Rapid Prototyping of Application Specific Signal Processors - Mark A. Richards 1997-02-28

Rapid Prototyping of Application Specific Signal Processors presents leading-edge research that focuses on design methodology, infrastructure support and scalable architectures developed by the 150 million dollar DARPA United States Department of Defense RASSP Program. The contributions to this edited work include an introductory overview chapter that explains the origin, concepts and status of this effort. The RASSP Program is a multi-year DARPA/Tri-Service initiative intended to dramatically improve the process by which complex digital systems, particularly embedded signal processors, are designed, manufactured, upgraded and supported. This program was originally driven by military applications for signal processing. The requirements of military applications for real-time signal processing are typically more demanding than those of commercial applications, but the time gap between technology employed in advanced military prototypes and commercial products is narrowing rapidly. The research on methodologies, infrastructure and architectures presented in this book is applicable to commercial signal processing systems that are in design now, or will be developed before the end of the decade. Rapid Prototyping of Application Specific Signal Processors is a valuable reference for developers of embedded digital systems, particularly systems engineers for signal processing systems (such as digital TV, biomedical image processing systems and telecommunications) and for military contractors who are developing signal processing systems. This book will also be of interest to managers who are charged with responsibility for creating and maintaining environments and infrastructures for developing large embedded digital systems. The chief value for managers will be the defining of methods and processes that reduce development time and cost.

Artificial Intelligence Illuminated - Ben Coppin 2004

Artificial Intelligence Illuminated presents an overview of the background and history of artificial intelligence, emphasizing its importance in today's society and potential for the future. The book covers a range of AI techniques, algorithms, and methodologies, including game playing, intelligent agents, machine learning, genetic algorithms, and Artificial Life. Material is presented in a lively and accessible manner and the author focuses on explaining how AI techniques relate to and are derived from natural systems, such as the human brain and evolution, and explaining how the artificial equivalents are used in the real world. Each chapter includes student exercises and review questions, and a detailed glossary at the end of the book defines important terms and concepts highlighted throughout the text.

Intelligence Science - Zhongzhi Shi 2012-03-26

Intelligence Science is an interdisciplinary subject dedicated to joint research on basic theory and technology of intelligence by brain science, cognitive science, artificial intelligence and others. Brain science explores the essence of brain research on the principle and model of natural intelligence at the molecular, cell and behavior level. Cognitive science studies human mental activity, such as perception, learning, memory, thinking, consciousness etc. In order to implement machine

intelligence, artificial intelligence attempts simulation, extension and expansion of human intelligence using artificial methodology and technology. Research scientists from the above three disciplines work together to explore new concepts, new theories, and methodologies. This book will introduce the concept and methodology of intelligence science systematically. The whole book is divided into 18 chapters altogether. It can be regarded as a textbook in courses of intelligence science, cognitive science, cognitive informatics etc. for senior and graduate students. It has important reference value for researchers engaged in fields such as intelligence science, brain science, cognitive science, neural science, artificial intelligence, psychology and so on.

Contents: Introduction Foundation of Neurophysiology Neural Computation Mind Model Perceptual Cognition Visual Information Processing Auditory Information Processing Computational Linguistics Learning Memory Thought Intelligence Development Emotion and Affect Artificial Immune System Consciousness Symbolic Logic Prospects Readership: Graduate and postgraduate students and professionals in the field of artificial intelligence.

Keywords: Intelligence; Emotion; Immune System; Consciousness; Symbolic Logic; Machine Proves; Brain-Like Machine Key Features: Presents the framework of the new interdisciplinary subject and foundation of the series on intelligence science Provides a walkthrough to the key issues of brain science, cognitive science and artificial intelligence Bringing together diverse viewpoints and expertise from multidisciplinary communities, the book explores the basic theory and technology of intelligence to build a brain-like machine with human-level intelligence

New Scientist - 1963-04-25

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences".
