The Politics of Austerity - Michael Burton 2016-10-12

This book considers the relationship between public spending and public deficit and the varying successes and difficulties governments have had in recent years to balance the two. As the fiscal crash of 2007/8 turned into the Great Recession and tax revenues tumbled, public finances

across the UK, the USA and Europe plunged into deficit. Controversial attempts by governments to balance their budgets, commonly described as austerity by critics, had mixed success, politically and economically. Michael Burton outlines how politicians tackled the worst economic downturn in over half a century, drawing on previous examples of deficit-reduction to see how governments managed public finances in recessions and where austerity worked and where it failed. This two-part book, which for the first time provides an historical context to austerity, analyses firstly deficit-reduction in the UK in the 1970s, 1980s, 1990s and 2010-2016, and then looks at case studies in Europe, the USA, Canada and Asia Pacific. The author concludes that with the ageing population placing greater pressure through health and pensions on the public finances of the developed world, politicians and their electorates will have to learn to live long-term with austerity.

Reducing Oral Health Disparities: What Can We Learn from Social, Environmental and Cultural Factors? - Tamanna Tiwari 2017-12-05

Oral health disparities are profound worldwide, and they affect the quality of life of individuals of all age groups. Disparities in oral health are seen in racial and ethnic minorities, at different socioeconomic levels and due to differences in environment and cultural factors. Several determinants of oral health have been identified at the population, community, family and individual levels. These determinants represent a complex interplay of the social, biological, cultural and economic factors that in turn affect the oral health behaviors, environmental exposures, health care utilization. To date, biological factors related to oral diseases have received much attention in oral health research; whilst social and cultural determinants have just started to receive recognition for their role in oral disease development and progression. This research highlights that interventions designed to reduce disparities should adopt a multi-level approach in order to identify the modifiable mechanisms and target all determinants of oral health disparities. In this Research Topic, we will focus on the role of social, environmental and cultural factors in the development and progression of oral diseases, their role in oral health disparities and interventions focusing on these factors to improve oral health and reduce disparities.

Shadow Education and Social Inequalities in Japan - Steve R. Entrich
2017-12-07

This book examines why Japan has one of the highest enrolment rates in cram schools and private tutoring worldwide. It sheds light on the causes of this high dependence on 'shadow education' and its implications for social inequalities. The book provides a deep and extensive understanding of the role of this kind of education in Japan. It shows new ways to theoretically and empirically address this issue, and offers a comprehensive perspective on the impact of shadow education on social inequality formation that is based on reliable and convincing empirical analyses. Contrary to earlier studies, the book shows that shadow education does not inevitably result in increasing or persisting inequalities, but also inherits the potential to let students overcome their status-specific disadvantages and contributes to more opportunities in education. Against the background of the continuous expansion and the convergence of shadow education systems across the globe, the findings of this book call for similar works in other national contexts, particularly Western societies without traditional large-scale shadow education markets. The book emphasizes the importance and urgency to deal with the modern excesses of educational expansion and education as an institution, in which the shadow education industry has made itself (seemingly) indispensable.

Universal Health Coverage for Inclusive and Sustainable Development - Naoki Ikegami 2014-10-14

The goals of universal health coverage (UHC) are to ensure that all people can access quality health services, to safeguard all people from public health risks, and to protect all people from impoverishment due to illness, whether from out-of-pocket payments for health care or loss of income when a household member falls sick. Countries as diverse as Brazil, France, Japan, Thailand, and Turkey have shown how UHC can serve as a vital mechanism for improving the health and welfare of their citizens and lay the foundation for economic growth and competitiveness grounded in the principles of equity and sustainability. Ensuring

universal access to affordable, quality health services will be an important contribution to ending extreme poverty by 2030 and boosting shared prosperity in low-income and middle-income countries, where most of the world's poor live. Universal Health Coverage for Inclusive and Sustainable Development synthesizes the experiences from 11 countries Bangladesh, Brazil, Ethiopia, France, Ghana, Indonesia, Japan, Peru, Thailand, Turkey, and Vietnam in implementing policies and strategies to achieve and sustain UHC. These countries represent diverse geographic and economic conditions, but all have committed to UHC as a key national aspiration and are approaching it in different ways. The book examines the UHC policies for each country around three common themes: (1) the political economy and policy process for adopting, achieving, and sustaining UHC; (2) health financing policies to enhance health coverage; and (3) human resources for health policies for achieving UHC. The findings from these country studies are intended to provide lessons that can be used by countries aspiring to adopt, achieve, and sustain UHC. Although the path to UHC is specific to each country, countries can benefit from the experiences of others in learning about different approaches and avoiding potential risks.
