40 Days and 40 Nights - Matthew Chapman 2008-03-25

In this fascinating story of evolution, religion, politics, and personalities, Matthew Chapman captures the story behind the headlines in the debate over God and science in America.

Kitzmiller v. Dover Board of Education, decided in late 2005, pitted the teaching of intelligent design (sometimes known as "creationism in a lab coat") against the teaching of evolution.

Matthew Chapman, the great-great-grandson of Charles Darwin, spent several months covering the trial from beginning to end. Through his in-depth encounters with the

participants—creationists, preachers, teachers, scientists on both sides of the issue, lawyers, theologians, the judge, and the eleven parents

who resisted the fundamentalist proponents of intelligent design—Chapman tells a sometimes terrifying, often hilarious, and above all moving story of ordinary people doing battle in America over the place of religion and science in modern life.

The Best American Science Writing 2007 - Gina Kolata 2007-09-18

Provocative and engaging, this collection brings together the premiere science writing of the year. Featuring the imprimatur of bestselling author and New York Times reporter Gina Kolata, one of the nation's foremost voices in science and medicine, and with contributions from Atul Gawande, Elizabeth Kolbert, and Oliver Sacks, among others, *The Best American Science Writing 2007* is a compelling anthology of our most advanced, and most relevant, scientific inquiries.

40 Days and 40 Nights - Matthew Chapman 2007-04-10

A great-great grandson of Charles Darwin documents the *Kitzmiller v. Dover Board of Education* case in Pennsylvania through which evolution, rather than the "intelligent design" theory, was maintained as the educational curriculum.

Das geheime Leben der Bäume - Peter Wohlleben 2015-05-25

Im Wald geschehen die erstaunlichsten Dinge: Bäume tauschen Botschaften aus. Sie umsorgen nicht nur liebevoll ihren Nachwuchs, sondern pflegen auch alte und kranke Nachbarn. Bäume haben ein Gedächtnis, empfinden Schmerzen und bekommen sogar Sonnenbrand und Falten. Peter Wohlleben, Deutschlands bekanntester Förster, zeigt uns den Wald von einer völlig neuen Seite: In faszinierenden Geschichten über die ungeahnten Fähigkeiten der Bäume berücksichtigt er die neuesten wissenschaftlichen Erkenntnisse ebenso wie seine eigenen Erfahrungen. Ein informatives und unterhaltsames Buch über Bäume und Wälder, das uns das Staunen über die Wunder der Natur lehrt.

They Fought with what They Had - Walter Dumaux Edmonds 1951

The Human Instinct - Kenneth R. Miller 2019-04-23

From one of America's best-known biologists, a

revolutionary new way of thinking about evolution that shows "why, in light of our origins, humans are still special" (Edward J. Larson, Pulitzer Prize-winning author of *Evolution*). Once we had a special place in the hierarchy of life on Earth—a place confirmed by the literature and traditions of every human tribe. But then the theory of evolution arrived to shake the tree of human understanding to its roots. To many of the most passionate advocates for Darwin's theory, we are just one species among multitudes, no more significant than any other. Even our minds are not our own, they tell us, but living machines programmed for nothing but survival and reproduction. In *The Human Instinct*, Brown University biologist Kenneth R. Miller "confronts both lay and professional misconceptions about evolution" (*Publishers Weekly*, starred review), showing that while evolution explains how our bodies and brains were shaped, that heritage does not limit or predetermine human behavior. In fact, Miller argues in this "highly recommended" (*Forbes*) work that it is only thanks to evolution that we have the power to shape our destiny. Equal parts natural science and philosophy, *The Human Instinct* makes an "absorbing, lucid, and engaging...case that it was evolution that gave us our humanity" (Ursula Goodenough, professor of biology at Washington University in St. Louis). [Christian Worldview and the Academic Disciplines](#) - Deane E. D. Downey 2009-04-15 This book---an edited compilation of twenty-nine essays---focuses on the difference(s) that a Christian worldview makes for the disciplines or subject areas normally taught in liberal arts colleges and universities. Three initial chapters of introductory material are followed by twenty-six essays, each dealing with the essential elements or issues in the academic discipline involved. These individual essays on each discipline are a unique element of this book. These essays also treat some of the specific differences in perspective or procedure that a biblically informed, Christian perspective brings to each discipline. *Christian Worldview and the Academic Disciplines* is intended principally as an introductory textbook in Christian worldview courses for Christian college or university students. This volume will also be of interest to Christian students in secular post-secondary

institutions who may be encountering challenges to their faith---both implicit and explicit---from peers or professors who assume that holding a strong Christian faith and pursuing a rigorous college or university education are essentially incompatible. This book should also be helpful for college and university professors who embrace the Christian faith but whose post-secondary academic background---because of its secular orientation---has left them inadequately prepared to intelligently apply the implications of their faith to their particular academic specialty. Such specialists, be they professors or upper-level graduate students, will find the extensive bibliographies of recent scholarship at the end of the individual chapters particularly helpful. "Downey and Porter present a unique contribution to the perennial question of how faith interacts with the academic disciplines. Numerous factors contribute to this book's significance: the common conviction that one's Christian beliefs ought to shape the contents of one's teaching, the variety of perspectives and opinions, and the wide range of academic disciplines under discussion. The essays---originating among the excellent faculty of Trinity Western University---will deservedly be much used in undergraduate colleges and universities."---Hans Borsma J.I. Packer Professor of Theology, Regent College "Few faculty, Christian or otherwise, understand what their colleagues in other departments are doing or why. This collection of essays is not only an excellent introduction to the whole scope of academic enterprises but to the unique and important relationship between each discipline and the Christian faith. An important book not only for the entire range of faculty but for students yearning to understand both their Christian faith and what is being taught in the classroom."---James W. Sirf author of the *Universe Next Door* and, with co-author Carl Peraino, *Deepest Differences A Christian Atheist Dialogue* "Christian Worldview and the Academic Disciplines is a book long overdue. It will serve as an outstanding textbook for interdisciplinary courses. But this book is more than that. Christian Worldview and the Academic Disciplines is a book that everyone concerned with Christian thought, especially in the context of the Academy, will want to read. I

highly recommend it."---Craig A. Evans Payment Distinguished Professor of New Testament, Acadia Divinity College Nova Scotia *More Than Darwin* - Randy Moore 2008 Compiles an up-to-date reference on all of the people and places who have been involved in the evolution and creationism debate.

Intelligently Designed - Edward Caudill 2013-11-15

Tracing the growth of creationism in America as a political movement, this book explains why the particularly American phenomenon of anti-evolution has succeeded as a popular belief. Conceptualizing the history of creationism as a strategic public relations campaign, Edward Caudill examines why this movement has captured the imagination of the American public, from the explosive Scopes trial of 1925 to today's heated battles over public school curricula. Caudill shows how creationists have appealed to cultural values such as individual rights and admiration of the rebel spirit, thus spinning creationism as a viable, even preferable, alternative to evolution. In particular, Caudill argues that the current anti-evolution campaign follows a template created by Clarence Darrow and William Jennings Bryan, the Scopes trial's primary combatants. Their celebrity status and dexterity with the press prefigured the Moral Majority's 1980s media blitz, more recent staunchly creationist politicians such as Sarah Palin and Mike Huckabee, and creationists' savvy use of the Internet and museums to publicize their cause. Drawing from trial transcripts, media sources, films, and archival documents, *Intelligently Designed* highlights the importance of historical myth in popular culture, religion, and politics and situates this nearly century-old debate in American cultural history.

Handbook of the Sociology of Morality - Steven Hitlin 2010-10-17

Human beings necessarily understand their social worlds in moral terms, orienting their lives, relationships, and activities around socially-produced notions of right and wrong. Morality is sociologically understood as more than simply helping or harming others; it

encompasses any way that individuals form understandings of what behaviors are better than others, what goals are most laudable, and what "proper" people believe, feel, and do. Morality involves the explicit and implicit sets of rules and shared understandings that keep human social groups intact. Morality includes both the "shoulds" and "should nots" of human activity, its proactive and inhibitive elements. At one time, sociologists were centrally concerned with morality, issues like social cohesion, values, the goals and norms that structure society, and the ways individuals get socialized to reproduce those concerns. In the last half-century, however, explicit interest in these topics has waned, and modern sociology has become uninterested in these matters and morality has become marginalized within the discipline. But a resurgence in the topic is happening in related disciplines - psychology, neurology, philosophy, and anthropology - and in the wider national discourse. Sociology has much to offer, but is not fully engaged in this conversation. Many scholars work on areas that would fall under the umbrella of a sociology of morality but do not self-identify in such a manner, nor orient their efforts toward conceptualizing what we know, and should know, along these dimensions. The Handbook of the Sociology of Morality fills a niche within sociology making explicit the shared concerns of scholars across the disciplines as they relate to an often-overlooked dimension of human social life. It is unique in social science as it would be the first systematic compilation of the wider social structural, cultural, cross-national, organizational, and interactional dimension of human moral (understood broadly) thought, feeling, and behavior.

Godless - Dan Barker 2008-09-01

One man shares the story of his transformation from evangelical Christian to atheist and examines the train of thought that brought him there. After almost twenty years of evangelical preaching, missionizing, and Christian songwriting, Dan Barker "threw out the bathwater and discovered that there is no baby." In *Godless*, Barker describes the intellectual and psychological path he followed in moving from fundamentalism to freethought. *Godless* includes sections on biblical morality, the historicity of

Jesus, biblical contradictions, the unbelievable resurrection, and much more. It is an arsenal for skeptics and a direct challenge to believers. Along the way, Barker relates the positive benefit readers will experience from learning to trust in reason and human kindness instead of living in fear of false judgment and moral condemnation. Advance Praise for *Godless* "Valuable in the human story are the reflections of intelligent and ethical people who listen to the voice of reason and who allow it to vanquish bigotry and superstition. This book is a classic example." —Christopher Hitchens, author of *God is Not Great* "The most eloquent witness of internal delusion that I know—a triumphantly smiling refugee from the zany, surreal world of American fundamentalist Protestantism—is Dan Barker." —Richard Dawkins, author of *The God Delusion* "Godless was a revelation to me. I don't think anyone can match the (devastating!) clarity, intensity, and honesty which Dan Barker brings to the journey—faith to reason, childhood to growing up, fantasy to reality, intoxication to sobriety." —Oliver Sacks, author of *Musicophilia* "In *Godless*, Barker recounts his journey from evangelical preacher to atheist activist, and along the way explains precisely why it is not only okay to be an atheist, it is something in which to be proud." —Michael Shermer, publisher of *Skeptic Magazine* "Godless is a fascinating memoir and a handbook for debunking theism. But most of all, it is a moving testimonial to one man's emotional and intellectual rigor in acclaiming critical thinking." —Robert Sapolsky author of *Why Zebras Don't Get Ulcers*

Paranoid Pedagogies - Jennifer A. Sandlin
2017-10-27

This edited book explores the under-analyzed significance and function of paranoia as a psychological habitus of the contemporary educational and social moment. The editors and contributors argue that the desire for epistemological truth beyond uncertainty characteristic of paranoia continues to profoundly shape the aesthetic texture and imaginaries of educational thought and practice. Attending to the psychoanalytic, post-psychoanalytic, and critical significance of paranoia as a mode of engaging with the world, this book further inquires into the ways in which

paranoia functions to shape the social order and the material desire of subjects operating within it. Furthermore, the book aims to understand how the paranoiac imaginary endemic to contemporary educational thought manifests itself throughout the social field and what issues it makes manifest for teachers, teacher educators, and academics working toward social transformation.

Darwin, el seu temps, la seua obra, la seua influència - 2011

Aquest volum és fruit de l'exposició homònima coproduïda per la Universitat de València i l'Institut d'Estudis Catalans i dirigida per Víctor Navarro i Jesús Català. L'exposició va nèixer amb l'objectiu primordial d'oferir una visió esclaridora no només del cor teòric del darwinisme, sinó de les circumstàncies de la seua construcció, difusió i transmissió i, en especial, de l'apropiació del darwinisme a València.

Getting Science Wrong - Paul Dicken
2018-01-11

When Galileo dropped cannon-balls from the top of the Leaning Tower of Pisa, he did more than overturn centuries of scientific orthodoxy. At a stroke, he established a new conception of the scientific method based upon careful experimentation and rigorous observation - and also laid the groundwork for an ongoing conflict between the critical open-mindedness of science and the recalcitrant dogmatism of religion that would continue to the modern day. The problem is that Galileo never performed his most celebrated experiment in Pisa. In fact, he rarely conducted any experiments at all. The Church publicly celebrated his work, and Galileo enjoyed patronage from the great and the powerful; his ecclesiastical difficulties only began when disgruntled colleagues launched a campaign to discredit their academic rival. But what does this tell us about modern science if its own foundation myth turns out to be nothing more than political propaganda? *Getting Science Wrong* discusses some of the most popular misconceptions about science, and their continuing role in the public imagination.

Drawing upon the history and philosophy of science it challenges wide-spread assumptions and misunderstandings, from creationism and climate change to the use of statistics and computer modelling. The result is an engaging introduction to contentious issues in the philosophy of science and a new way of looking at the role of science in society.

The Debaters of This Age - Steven H Propp
2019-02-05

It is June 2018 as an unusual group of scholars, professors, lecturers, and students gather in a California hotel. They are all attendees of an Apologetics conference intended to join qualified representatives of Christian, Deist, and Atheist thought for a two-week, no-holds-barred debate and discussion of their respective positions that will ultimately be included in a book published after the conference. Evangelical Christianity is represented by advocates of Evidentialist and Presuppositionalist approaches to Apologetics. Catholicism, liberal Christianity, and Deism are also well-supported. The Atheist perspective is advocated by a polemical author and a college professor notorious for attacking the views of his Christian students. As the participants argue over controversial issues such as cosmology, evolution, The Bible, historical evidence for Jesus, the resurrection, biblical prophecies, and the problem of evil, intellectual fireworks result. But what will result when such a volatile and eclectic group is placed face-to-face for more than two weeks? *The Debaters of this Age* is the tale of what happens inside a California hotel in 2018 when a group of intellectuals gather to vigorously discuss the religious issues of our time.

THE UNIVERSE IS NOT CREATION - H. Hanson
2015-02-06

There is no Creator: Religion is a Fraud, What Now? demonstrates the falsehood and fraud of religion by proving beyond a reasonable doubt the non-existence of a "creator." All but the most timid and ignorant readers should be emboldened to cast off the imaginary crutches "god" and "soul" and break free from laws, rites and "donations" imposed only for submission to fraudulent impostors. In "What Now?," down-to-

earth rules of conduct for a world free from philosophical Snake Oil are proposed. Current knowledge makes religion offensively ludicrous, compelling the author's use of unequivocal language and occasional humor and irony.

Hyperdemocracy - S. Welch 2013-10-24

This book argues that a well-educated citizenry and freer flow of information has contributed to a state of "hyperdemocracy" which impedes itself. This book applies the idea of 'reflexive modernization' to democratic theory, setting out a new perspective on the challenges democracy faces.

Once We All Had Gills - Rudolf A. Raff

2012-07-16

In this book, Rudolf A. Raff reaches out to the scientifically queasy, using his life story and his growth as a scientist to illustrate why science matters, especially at a time when many Americans are both suspicious of science and hostile to scientific ways of thinking. Noting that science has too often been the object of controversy in school curriculums and debates on public policy issues ranging from energy and conservation to stem-cell research and climate change, Raff argues that when the public is confused or ill-informed, these issues tend to be decided on religious, economic, and political grounds that disregard the realities of the natural world. Speaking up for science and scientific literacy, Raff tells how and why he became an evolutionary biologist and describes some of the vibrant and living science of evolution. *Once We All Had Gills* is also the story of evolution writ large: its history, how it is studied, what it means, and why it has become a useful target in a cultural war against rational thought and the idea of a secular, religiously tolerant nation.

Disbelief 101 - S. C. Hitchcock 2009-05-01

Filled with wit, humor, and clear metaphor, this

exploration into atheism is written specifically for young adults, though any adult interested in learning more about atheism will find value within. Not just focused on atheism, this crash course in logical thinking addresses the issues of indoctrination, whether it be religious, political, or commercial, and makes the case that morality is created through reasoning and logic, not through divine communication. Many hot topics are touched upon, such as traditional arguments for God's existence, the relationship of evolution and religious belief, the incompatible nature of science and religion, and the harmfulness of both Christianity and Islam.

The Theory of Evolution is a Result of Erroneous Extrapolation - June Meimban 2019-03-07

Atheism is all over the world. One of the key reasons is the universal acceptance of the theory of evolution. Evolution implies that life on earth is a product of chance, i.e., a random process. This is the opposite of what the Bible teaches that God created life. For decades, the theory of evolution has been taught in high schools, colleges, and universities as the explanation for the origin of life. This has caused many people to depart from the belief in the existence of God. This issue was at the heart of a landmark US federal case in 2005, where scientists on both sides argued their positions. At the center of the debate is a microscopic molecular nanomachine found inside the bacteria, the flagellum. Intelligent design scientists argued that the bacterial flagellum could not have been a product of evolution because of its irreducible complexity. Evolutionist scientists argued on the contrary. The judge decided in favor of evolution. This book is written in an easy-to-understand, step-by-step manner so that even high school students and their parents can grasp the complex issues involved. Mr. Meimban demonstrated that the theory of evolution is the result of the erroneous use of correlation and extrapolating it to justify assertions of cause and effect. At the core of his exposition is a mathematical demonstration that the flagellum could not have been a product of random process. There is a creator. God exists. "The fool says in his heart, 'There is no God.' They are corrupt, their deeds are vile; there is no one who does good."-Psalm 14:1 (NIV)

God Or Allah, Truth Or Bull? - Richard Woo 2011

Is there a perfect being? Is everything in the universe a creation of God, the so-called Intelligent Designer? Is there a providential divinity watching over the human drama and occasionally revealing information to us supernaturally? Writing about God and religious issues can attract adverse reactions from people, and one can never be sure of the kind of reception that may ensue even if one's arguments appear to be nothing less than logical. I hope this book will imbue in you a realization that there are no logical arguments for the existence of God or any god, apart from wishy-washy propositions that say little or nothing, and that no empirical evidence has ever been offered in support. Arguments must be decided on the basis of their being factual or non-factual, persuasive or unpersuasive, logical or illogical. Reason is a far more reliable or effective tool than a mountain of faith, especially if faith means adhering blindly to one's religious

teachings or dogma. Arguably, whether life is meaningful, whether there is a purpose to the universe, or whether there is a paradise waiting for us after we are buried or cremated are questions that will have to rest with each individual. Thus, if there are any truths to be found in this book, it is for you, the reader, to decide. Before he retired, Richard Woo was in international banking. Today he lives in Singapore, and is an avid reader on topics concerning science, politics, and religion.
